An introduction to digital image processing Wayne Niblack, 1986

Remote Sensing Digital Image Analysis John A. Richards, 2012-12-06 Possibly the greatest change confronting the practitioner and student of remote sensing in the period since the first edition of this text appeared in 1986 has been the enormous improvement in accessibility to image processing technology Falling hardware and software costs combined with an increase in functionality through the development of extremely versatile user interfaces has meant that even the user unskilled in computing now has immediate and ready access to powerful and flexible means for digital image analysis and enhancement An understanding at algorithmic level of the various methods for image processing has become therefore even more important in the past few years to ensure the full

capability of digital image processing is utilised This period has also been a busy one in relation to digital data supply Several nations have become satellite data gatherers and providers using both optical and microwave technology Practitioners and researchers are now faced therefore with the need to be able to process imagery from several sensors together with other forms of spatial data This has been driven to an extent by developments in Geographic Information Systems GIS which in turn have led to the appearance of newer image processing procedures as adjuncts to more traditional approaches

Digital Image Processing Wilhelm Burger, Mark J. Burge, 2016-03-25 This revised and expanded new edition of an internationally successful classic presents an accessible introduction to the key methods in digital image processing for both practitioners and teachers Emphasis is placed on practical application presenting precise algorithmic descriptions in an unusually high level of detail while highlighting direct connections between the mathematical foundations and concrete implementation The text is supported by practical examples and carefully constructed chapter ending exercises drawn from the authors years of teaching experience including easily adaptable Java code and completely worked out examples Source code test images and additional instructor materials are also provided at an associated website Digital Image Processing is the definitive textbook for students researchers and professionals in search of critical analysis and modern implementations of the most important algorithms in the field and is also eminently suitable for self study

Introduction to Digital Image Processing Dan Monroe, Harry Zwick, LETTERMAN ARMY INST OF RESEARCH PRESIDIO OF SAN FRANCISCO CA., 1984 Digital image processing is the manipulation of the digital representation of an image Source of the image can range from a common television video signal to complex imaging systems such as a scanning electron microscope Whatever the source of the image the basic techniques for storing and manipulating data are common to many image processing applications The actual hardware used in image processing is called a video frame grabber or frame buffer Video frame grabbers costing under 1000 are now available for many microcomputers including the IBM PC APPLE and S 100 bus systems Thus image processing is available to users where previously costs were prohibitive This document describes the image storage filtering techniques and one possible application in the biological sciences Keywords Pixels Convolution techniques Fourier filtering and Resolution Author

Digital Image Processing Wilhelm Burger, Mark J. Burge, 2012-01-19 Written as an introduction for undergraduate students this textbook covers the most important methods in digital image processing Formal and mathematical aspects are discussed at a fundamental level and various practical examples and exercises supplement the text The book uses the image processing environment ImageJ freely distributed by the National Institute of Health A comprehensive website supports the book and contains full source code for all examples in the book a question and answer forum slides for instructors etc Digital Image Processing in Java is the definitive textbook for computer science students studying image processing and digital processing
