see why people say it's unlike any other C book you've ever read. Learning a new language is no easy task. You might think the problem is your brain. It seems to have a mind of its own, a mind that doesn't always want to take in the dry technical stuff you're forced to study. The fact is your brain craves novelty. It's constantly searching, scanning, waiting for something unusual to happen. After all, that's the way it was built to help you stay alive. It takes all the routine, ordinary, dull stuff and filters it to the background so it won't interfere with your brain's real work: recording things that matter. How does your brain know what matters?
