University of California Publications in History, 1916 *Philosophy, Science, and History* Lydia Patton, 2014-06-27 *Philosophy, Science, and History: A Guide and Reader* is a compact overview of the history and philosophy of science that aims to introduce students to the groundwork of the field and to stimulate innovative research. The general introduction focuses on scientific theory change, assessment, discovery, and pursuit. Part I of the Reader begins with classic texts in the history of logical empiricism, including Reichenbach's discovery, justification, and distinction. With careful reference to Kuhn's analysis of scientific revolutions, the section provides key texts analyzing the relationship of HOPoS to the history of science, including texts by Santayana, Rudwick, and Shapin, and Schaffer. Part II provides texts illuminating central debates in the history of science and its philosophy. These include the history of natural philosophy, Descartes, Newton, Leibniz, Kant, Hume, and du Châtelet in a new translation, induction, and the logic of discovery, including the Mill-Whewell debate, Duhem and Hanson, and catastrophism versus uniformitarianism in natural history, Playfair on Hutton and Lyell, de Buffon, Cuvier, and Darwin. The editor's introductions to each section provide a broader perspective informed by contemporary research in each area, including related topics. Each introduction furnishes proposals, including thematic bibliographies for innovative research questions and projects in the classroom and in the field.

The Psychobiology of Mind William R. Uttal, 2014-06-27 Originally published in 1978, this book develops a conceptual synthesis of the field of physiological psychology, the science specifically concerned with the relationship between the brain and the mind. It was designed to elucidate the important questions under investigation, the basic intellectual and technical problems that were encountered, and the significance of the major empirical results of the time. Of equal or even greater importance is the author's derivation of the general principles relating brain and mind that had emerged after decades of modern research into this important question. Included in the volume are historical and philosophical perspectives on the mind-brain problem, as well as extensive discussions of instruments, methodology, empirical findings, and theory. Here is a powerful heuristic tool that informs the reader about the concepts and ideas implicit in this science, rather than simply exhaustively listing experimental results. The author does not ignore findings; he organizes them into three broad categories: localization, representation, and learning, then emphasizes the relationships among experiments. This is a book that synthesizes, integrates, and stresses concepts, principles, and problems. The careful organization of the book makes it especially useful for students of brain and mind at all levels.

Gibbon, 1984-12-03 *Anthropological Archaeology* *The Uttal Tetralogy of Cognitive Neuroscience* William R. Uttal, 2022-07-30 These four volumes, originally published between 1973 and 1988, were intended to provide a broad survey of cognitive neuroscience, a field known variously

as physiological psychology or psychobiology in the 1970s and 1980s when the books were written The general goal was to summarize what was known about the relation between brain and mind at that time with an emphasis on sensory and perceptual topics Out of print for many years the Tetralogy is now available again as a set for the first time which is as the author envisaged it or as individual volumes *The Philosopher's Guide to Sources, Research Tools, Professional Life, and Related Fields* Richard T.
