**The Ultimate Guide to Professional Database Programming with Python and PostgreSQL** Vivian Siahaan,Rismon Hasiholan Sianipar,2019-01-15 Python has various database drivers for PostgreSQL Currently the psycopg is the most popular PostgreSQL database adapter for the Python language The psycopg fully implements the Python DB API 2 0 specification The current version of the psycopg is 2 or psycopg2 The psycopg2 database adapter implemented in C as a libpq wrapper resulting in both fast and secure The psycopg2 provides many useful features such as client side and server side cursors asynchronous notification and communication COPY command support etc PostgreSQL was designed to run on UNIX like platforms However PostgreSQL was then also designed to be portable so that it could run on various platforms such as Mac OS X Solaris and Windows PostgreSQL is free and open source software Its source code is available under PostgreSQL license a liberal open source license You are free to use modify and distribute PostgreSQL in any form PostgreSQL requires very minimum maintained efforts because of its stability Therefore if you develop applications based on PostgreSQL the total cost of ownership is low in comparison with other database management systems In Chapter 2 you will learn querying data from the postgresql using Python including establishing a database connection creating a statement object executing the query processing the resultset

object querying data using a statement that returns multiple rows querying data using a statement that has parameters inserting data into a table using Python updating data in postgresql database using Python calling postgresql stored function using Python deleting data from a postgresql table using Python and postgresql Python transaction In Chapter 3 you will learn managing table structure and views including postgresql data types postgresql create table postgresql select into statement postgresql create table as using postgresql serial to create auto increment column identity column alter table drop table truncate table check constraint not null constraint foreign key primary key unique constraint managing postgresql views creating updatable views materialized views creating updatable views using the with check option clause and recursive view In Chapter 4 you will learn statements operators and clauses including select order by select distinct limit fetch in between postgresql like is null alias joins inner join postgresql left join self join full outer join cross join natural join group by having intersect operator except operator grouping sets cube and rollup In Chapter 5 you will learn postgresql trigger aggregate and string functions including creating the first trigger in postgresql managing postgresql trigger aggregate functions avg function max function min function sum function postgresql concat function ascii function trim function length function substring function regexp\_matches function regexp\_replace function replace function to\_number function and to\_char function

Beginning Databases With Mysql Neil Matthew, 2002      **POSTGRESQL FOR JAVA GUI: Database and Image Processing** Vivian

Siahaan, Rismon Hasiholan Sianipar, 2019-08-27 In this book you will learn how to build from scratch a criminal records management database system using Java PostgreSQL. All Java code for digital image processing in this book is Native Java. Intentionally not to rely on external libraries so that readers know in detail the process of extracting digital images from scratch in Java. There are only three external libraries used in this book: Connector J to facilitate Java to MySQL connections, JCalendar to display calendar controls, and JFreeChart to display graphics. Digital image techniques to extract image features used in this book are: grascaling, sharpening, inverting, blurring, dilation, erosion, closing, opening, vertical prewitt, horizontal prewitt, Laplacian, horizontal sobel, and vertical sobel. For readers, you can develop it to store other advanced image features based on descriptors such as SIFT and others for developing descriptor-based matching. In the first chapter, you will learn: How to install NetBeans JDK 11 and the PostgreSQL connector; How to integrate external libraries into projects; How the basic PostgreSQL commands are used; How to query statements to create databases, create tables, fill tables, and manipulate table contents is done. In the second chapter, you will learn: How to install NetBeans JDK 11 and the PostgreSQL connector; How to integrate external libraries into projects; How the basic PostgreSQL commands are used; How to query statements to create databases, create tables, fill tables, and manipulate table contents is done. In the third chapter, you will learn: querying data from the postgresql using jdbc, including establishing a database connection, creating a statement object, executing the query, processing the resultset object, querying data using a statement that returns multiple rows, querying data using a statement that has parameters, inserting data into a table using jdbc, updating data in postgresql database using jdbc, calling postgresql stored function using jdbc, deleting data from a postgresql table using jdbc, and postgresql jdbc transaction. In the fourth chapter, you will be taught how to extract image features utilizing BufferedImage class in Java GUI. In the fifth chapter, you will be taught how to create Crime database and its tables. In the sixth chapter, you will be taught to create Java GUI to view, edit, insert, and delete Suspect table data. This table has eleven columns: suspect\_id (primary key), suspect\_name, birth\_date, case\_date, report\_date, suspect\_status, arrest\_date, mother\_name, address, telephone, and photo. In the seventh chapter, you will be taught to create Java GUI to view, edit, insert, and delete Feature\_Extraction table data. This table has eight columns: feature\_id (primary key), suspect\_id (foreign key), feature1, feature2, feature3, feature4, feature5, and feature6. All six fields except keys will have a BLOB data type so that the image of the feature will be directly saved into this table. In the eighth chapter, you will add two tables: Police\_Station and Investigator. These two tables will later be joined to Suspect table through another table File\_Case which will be built in the ninth chapter. The Police\_Station has six columns: police\_station\_id (primary key), location, city, province, telephone, and photo. The Investigator has eight columns: investigator\_id (primary key), investigator\_name, rank, birth\_date, gender, address, telephone, and photo. Here you will design a Java GUI to display, edit, fill, and delete data in both tables. In the tenth chapter, you will add two tables: Victim and File\_Case. The File\_Case table will connect four other tables: Suspect, Police\_Station, Investigator, and Victim. The Victim table has nine columns: victim\_id (primary key), victim\_name,

crime\_type birth\_date crime\_date gender address telephone and photo The File\_Case has seven columns file\_case\_id primary key suspect\_id foreign key police\_station\_id foreign key investigator\_id foreign key victim\_id foreign key status and description Here you will also design a Java GUI to display edit fill and delete data in both tables Finally this book is hopefully useful for you

*PostgreSQL Replication* Zoltan Böszörményi, Hans-Jürgen Schönig, 2013 This book has a chapter dedicated to each aspect of replication The new features of PostgreSQL 9 are introduced and there are lots of practical examples and screenshots PostgreSQL Replication is ideal for PostgreSQL administrators who want to set up and understand replication If you want to make your databases more robust more secure faster and more scalable you will find all the information you need in this single book focusing exclusively on PostgreSQL replication It is assumed that you already have some basic experience with PostgreSQL

Choosing a Data Platform: PostgreSQL, MySQL, Mongo, and Cloud Amataverna Lee, 2021 There are a lot of different databases out there with their own pros and cons It's important to know what your options are In this course instructor Amataverna Lee covers PostgreSQL MySQL Mongo a NoSQL database and several cloud based databases to help you choose what will be best for you You're likely to encounter PostgreSQL in your career so it's important to be familiar with this type of database and how it differs from other types MySQL is one of the most popular SQL dialects used today so this is another important one to understand Amataverna introduces you to Mongo a nonrelational database that does not use SQL and shows you some tools that you would need to use in Mongo She also goes over several popular cloud based options Snowflake Snowsight Amazon Web Services Redshift and S3 and Google Cloud Platform With an understanding of these options you can make a more informed choice on what is best for you
