Washington,2019-02-26 Learn more about BLOCKCHAIN TECHNOLOGY Blockchain is a decentralized ledger of transactions You can look at blockchain as a large database of records that is managed by different people including you instead of counting on certain organizations to manage your data You can think of it as a spreadsheet that is sent over a network of computers which is made in order to regulate the spreadsheet so everybody can make sure every record in it is correct As what the term blockchain suggests each procedure of every transaction is kept as a block which links to everything that comes after it The said blocks are then stored in a network where everyone has a copy of the block so that they can be easily accessed However each block is protected by a certain key so it doesn't get tampered by anyone within the network What does that mean then Currently every file or record that is important to you is managed by an organization that you trust banks insurance providers credit card companies the government human resources and other similar bodies exist because of the value of trust that people give them Because they operate with the virtue of trust these organizations are the ones that manage most if not all of the transactions that involve money To make sure that your records and transactions are protected your data is made safe in a centralized database that only certified personnel are authorized to access While blockchain promises to distribute data in such a way that there is not a single processor that would be handling it For example instead of having one or a couple of servers storing data for an insurance everybody that is joined to a network will have access to insurance data Yes that's right this would also mean that your data is going to be shared between several people that needs to come to an agreement on its integrity Blockchain may seem like a jargon at the moment most of the things that you come across in your daily life are bound to be transformed by this concept This seemingly imminent concept is already here and is little by little being adapted in economics trade and even in the most straightforward transactions that you do Chapter 1 Implications of Blockchain Big Data Privacy and Personal Data Chapter 2 Profiting from Blockchain Technologies Chapter 3 Blockchain and the Finance Industry Chapter 4 Blockchain and Industries Other Than Finance Chapter 5 Blockchain Development Chapter 6 The Future of Blockchain Chapter 7 Limitations Challenges of Blockchain Technology Chapter 8 How to Profit from a Blockchain Go ahead and buy this book on Blockchain today **Blockchain** Tailor Jacobs,2017-06-11 Blockchain Sale price You will save 66% with this offer Please hurry up A Step By Step Guide For Beginners To Implementing Blockchain Technology And Leveraging Blockchain Programming Want to know the benefits and uses of blockchain This book can be a good choice for all beginners Blockchain technology has a good future because it is getting acceptance all over the
