Take the POWER back! Emmanuel Fragnière, George Sullivan, Loïc Viret, 2026-01-22 Take the Power Back is a practical and inspiring guide for anyone ready to rethink energy including individuals communities companies and institutions At a time of rising energy costs climate uncertainty and ageing infrastructure this book presents a clear choice remain dependent on centralised systems or take action to establish clean resilient locally managed microgrids Microgrids are more than just technical solutions they re opportunities They enable communities to generate store and manage their own energy thereby reducing their exposure to price volatility and their dependence on fossil fuels They offer environmental benefits economic resilience and the chance to solve local problems with local solutions This handbook explores the why and how of microgrids from residential rooftops to community scale systems It covers essential components such as solar panels batteries smart meters and control systems as well as governance regulation and financial models Whether through turnkey providers or community owned systems microgrids are both achievable and adaptable However this is also a story of empowerment The book highlights the rise of the prosumer citizens who produce and manage their own energy and the role of community engagement in shaping a sustainable future With real world examples and practical advice Take the Power Back demonstrates that energy autonomy is possible and within reach We have a choice We can act Together we can build energy systems that are cleaner smarter and fairer

5 Forces Analysis for the Market Entry and Expansion Strategy of Shunfeng International Clean Energy Ltd Heike Stapf, 2015-06-11 Seminar paper from the year 2015 in the subject Business economics Business Management Corporate Governance University of applied sciences Nürnberg course Strategic Management language English abstract There are big plans for renewables in future Countries target to 100 % domestic energy demand to be produced by renewable energies High investments in the branch are supposed to bring the desired targets The world s demand for energy is growing rapidly since intensified globalization results

in global economic growth and welfare giving companies the incentive to conquer new markets As more electricity is needed its price is expected to rise worldwide that hampers economic growth The world s demand is calling for a global energy mix that adapts to our world s changing economic and ecological conditions Thus providing and combining various independent new energy resources for sustainability with the outlook of reducing CO2 emissions in the long term and to assure and improve energy supply around the globe China is successful due to its competitive advantage of producing lowcost solar modules which has badly affected the EU photovoltaic market and its competing enterprises but granted the country itself a strong position in the global photovoltaic market with their financial opportunity to expand easily The implementation of tariff regulation and minimum prices to restrain imports for the protection of Europe s domestic market forces China to rethink its strategies China s high government subsidies target for intensive investments in form of expansions to new territories As subsidies may lead to overcapacities in the home country some solar companies are preparing for market entries in emerging countries eager surviving plans of PV companies in times of high competition and falling prices to increase sales volumes to prevent another insolvency in the sector Combining South Africa s potential and new business opportunities in highly competitive photovoltaic markets Shunfeng International Clean Energy Ltd could help to boost Wuxi Suntechs figures to be in black again

Taming the Sun Varun Sivaram,2018-03-02 How solar could spark a clean energy transition through transformative innovation creative financing revolutionary technologies and flexible energy systems Solar energy once a niche application for a limited market has become the cheapest and fastest growing power source on earth What s more its potential is nearly limitless every hour the sun beams down more energy than the world uses in a year But in Taming the Sun energy expert Varun Sivaram warns that the world is not yet equipped to harness erratic sunshine to meet most of its energy needs And if solar s current surge peters out prospects for replacing fossil fuels and averting catastrophic climate change will dim Innovation can brighten those prospects Sivaram explains drawing on firsthand experience and original research spanning science business and government Financial innovation is already enticing deep pocketed investors to fund solar projects around the world from the sunniest deserts to the poorest villages Technological innovation could replace today s solar panels with coatings as cheap as paint and employ artificial photosynthesis to store intermittent sunshine as convenient fuels And systemic innovation could add flexibility to the world s power grids and other energy systems so they can dependably channel the sun s unreliable energy Unleashing all this innovation will require visionary public policy funding researchers developing next generation solar technologies refashioning energy systems and economic markets and putting together a diverse clean energy portfolio Although solar can t power the planet by itself it can be the centerpiece of a global clean energy revolution A Council on Foreign Relations Book
