The subsequent chapters in part 1 explain the extensions. Chapter 2 introduces conventional modeling of multidimensional panel data including confirmatory factor analysis (CFA) and growth curve modeling and its limitations. The logical and theoretical extension of a CFA to a second order growth curve known as curve of factors model (CFM) are explained in Chapter 3. Chapter 4 illustrates the estimation and interpretation of unconditional and conditional CFMs. Chapter 5 presents the logical and theoretical extension of a parallel process model to a second order growth curve known as factor of curves model (FCM). Chapter 6 illustrates the estimation and interpretation of unconditional and conditional FCMs. Part 2 reviews growth mixture modeling including unconditional growth mixture modeling (Ch 7) and conditional growth mixture models (Ch 8). How to extend second order growth curves, curve of factors and factor of curves models to growth mixture models is highlighted in Chapter 9. Ideal as a supplement for use in graduate courses on advanced structural equation, multilevel, longitudinal or latent variable modeling, latent growth curve and mixture modeling, factor analysis, multivariate statistics or advanced quantitative techniques, methods taught in psychology, human development and family studies, business, education, health and social sciences, this book's practical approach also appeals to researchers. Prerequisites include a basic knowledge of intermediate statistics and structural equation modeling.

Categorical Data Analysis with Structural Equation Models Kevin J. Grimm, 2025-08-25 Multivariate categorical outcomes such as Likert scale responses and disease diagnoses require specialized structural equation modeling SEM software to be analyzed properly. Providing needed skills for applied researchers and graduate students this book leads readers from regression analysis with categorical outcomes to complex SEMs with latent variables for categorical indicators. The initial section sets the stage by demonstrating regression analyses for binary ordered or count outcomes using R. Chapters then reanalyze the same data using Mplus and R lavaan to show how univariate models for categorical outcomes can be estimated and interpreted with SEM programs. Subsequently the book turns to multivariate models discussing path models confirmatory factor models and latent variable path models with categorical outcomes. Concluding chapters cover advanced SEM with categorical outcomes including growth models latent class models and survival models. Worked through examples are featured throughout. The companion website provides R including lavaan
