ABSTRACT

In recent years there has been an increase in the size of Big Data as a result of the growth of social networks, Internet of Things (IoT), business information, etc. A number of problems arise when using Big Data. They can be solved by using Cloud Computing. There are many cloud solutions for processing, analysis and data storage but their application requires taking account of and analyzing characteristics as scalability, parameters concerning the hardware configuration, the system and the application software availability price, etc. A comparative analysis of cloud service providers is made in this article, and guidelines for optimal choice of the provider are defined.

Keywords: cloud computing, private cloud, big data.

INTRODUCTION

In recent years trends of information growth at an increasingly large scale have been observed. The terms terabyte, zeta byte and Big Data are circulating in the public domain more and more often. The reasons for big data growth refer to:

- Accelerated growth of the number of IoT and registration of events from radio frequency identifiers (RFID);
- A huge flow of data from social networks in the Internet;
- Accumulation of large volumes of business information along with maintaining the existing one;
- Data from subscribers of the mobile operators;
- Data from devices for audio and video registration;

- Data on the weather conditions and others.

Along with the big data expansion several problems related to its management arise. Those of greater significance are:

Problems in the storage, processing and analysis of Big data, increase of the complexity and volume of the work and lack of hardware equipment and personnel to carry out the process;

Problems with provision of safe storage and information processing in small and medium-sized companies;

Need for spending funds for the purchase of system and application software

Some of these problems can be solved through the usage of cloud services.

English abstract Internet of Things IoT and Cloud Computing play a vital role in the field of Information Technology The goal
of IoT is to link objects of heterogeneous in nature to avail smart services and application anywhere anytime using any device
Cloud Computing allows computer users to conveniently rent access to fully featured applications to software development
and deployment environments and to computing infrastructure assets such as network accessible data storage and
processing with its salient features of on demand self service broad network access resource pooling rapid elasticity and
measured service Though the Cloud and IoT have emerged as independent technology merging these two technologies brings
renaissance in the field of future networks and in building smart environment This new evolvment is known as CloudIoT One
of the important challenges in CloudIoT is security Challenges on the integration of the Cloud within IoT are to be a major
bottleneck The integration of security mechanism and data privacy are also a major concern Any leakage of information from
any of the CloudIoT could severely damage the privacy and authenticity of the users and data Researchers all over the world
put on efforts in integrating smart CloudIoT services to satisfy the needs of the CloudIoT Users But no prominent
architecture has been authenticated so far Hence it is imperative to design architecture to integrate CloudIoT smart services
and applications to access smart services in a secured manner at anywhere anytime The major challenges in implementing
this scenario are security factors such as authenticity confidentiality integrity and privacy In network security there are
several types of attacks which can harm the network resources and services Distributed Denial of Service DDoS is one of the
malicious attacks which can harm data communication in CoT potentially There is a problem that may render customers to
withdraw from the cloud services A traditional DDoS attack aims at servers and or the bandwidth of a network or a website
in order to make them unavailable to their intended users However attackers can generate DDoS attack to harm the cloud
resources in the same way as the cloud has a huge pool of resources which are larger than attackers resources **Big Data

This volume provides challenges and Opportunities with updated in depth material on the application of Big data to complex
systems in order to find solutions for the challenges and problems facing big data sets applications Much data today is not
natively in structured format for example tweets and blogs are weakly structured pieces of text while images and video are
structured for storage and display but not for semantic content and search Therefore transforming such content into a
structured format for later analysis is a major challenge Data analysis organization retrieval and modeling are other
foundational challenges treated in this book The material of this book will be useful for researchers and practitioners in the

field of big data as well as advanced undergraduate and graduate students Each of the 17 chapters in the book opens with a chapter abstract and key terms list The chapters are organized along the lines of problem description related works and analysis of the results and comparisons are provided whenever feasible
