Vernacular Architecture and Regional Design Kingston Heath, 2009-06-04 A series of international case studies demonstrates the place of vernacular architecture in the design process for a wide selection of contemporary architects work. Offers a clear analysis of the vernacular building tradition placing architecture in its social context. Introduces a new socially and environmentally inspired approach to sustainable design. Twenty-Five+ Buildings Every Architect Should Understand Simon Unwin, 2023-11-03

The underlying theme of Twenty Five Buildings Every Architect Should Understand is the relationship of architecture to the human being: how it frames our lives and orchestrates our experience; how it can help us make sense of the world and contribute to our sense of identity and place. Exploring these dimensions through a wide range of case studies that illustrate the rich diversity of twentieth and twenty-first century architecture, this book is essential reading for every architect. With the addition of numerous shorter analyses, this new edition covers an even greater range of architectural ideas, providing students and architects with further inspiration for exploration in their own design work.

Architects live by ideas. But where do they come from? And how do they shape buildings? There is no one right way to do architecture. This book illustrates many. Its aim is to explore the rich diversity of architectural creativity by analysing a wide range of examples to extract the ideas behind them.

Twenty Five Buildings Every Architect Should Understand is a companion to Simon Unwin's Analysing Architecture: the Universal Language of Place Making (most recent edition 2021) and part of the trilogy which also includes his Exercises in Architecture: Learning to Think as an Architect (second edition 2022). Together the three books offer an introduction to the workings of architecture, providing for the three aspects of learning: theory, examples, and practice.

Twenty Five Buildings focusses on analysing examples using the methodology offered by Analysing Architecture, which operates primarily through the medium of drawing. An underlying theme of Twenty Five Buildings Every Architect Should Understand is the relationship of architecture to the human being: how it frames our lives and orchestrates our experiences; how it can help us give form to the world and contributes to our senses of identity and place. Exploring these dimensions through case studies that illustrate the rich diversity of twentieth and twenty-first century architecture, this book is essential reading and hopefully an inspiration for every architect.

In this new edition, supplementary analysis and discussion has been added to each of the twenty-five case studies, drawing attention to their influences from and on other architects. A number of extra shorter analyses have been included too, following the practice of presenting extra small dishes interspersed among main courses in high-end restaurants. These additional short analyses account for the sign after Twenty Five in the title of this edition and double the number of buildings analysed to
