Jewish Faith and Modern Science Norbert M. Samuelson, 2008-10-17 In Jewish Faith and Modern Science renowned Jewish philosopher and rabbi Norbert Samuelson argues that modern Jewish philosophy has died_ that it has failed to address the challenges to traditional beliefs posed by scientific advances and is therefore no longer relevant to Jews today Samuelson confronts these challenges head on critically reflecting on how all of the forms of contemporary Judaism from orthodox to liberal to secular to new age can address questions raised by the latest scientific advances Considering questions ranging from the existence of the soul to the relationship between God and particle physics to the debate over when life begins and ends Samuelson paves the way for a rebirth of Jewish philosophy applicable to life in the modern world

For all readers interested in calculus based physics **Planet Earth** Rosalie Bertell, 2001 As weaponry and warfare have become more complex and sophisticated so the long term effects have become more deadly In Planet Earth Rosalie Bertell proposes that the key to understanding the impact of future wars lies in a close analysis of the past She shows how the quest for military power has destabilized the delicate natural balance of the earth's ecosystem causing widespread devastation in environmental economic and social terms and calls for a new approach to security which rises above national agendas to seek global solutions to a global problem

Feyerabend's Epistemological Anarchism Mansoor Niaz, 2020-01-27 This book argues that the traditional image of Feyerabend is erroneous and that contrary to common belief he was a great admirer of science It shows how Feyerabend presented a vision of science that represented how science really works Besides giving a theoretical framework based on Feyerabend's philosophy of science the book offers criteria that can help readers to evaluate and understand research reported in important international science education journals with respect to Feyerabend's epistemological anarchism The book includes an evaluation of general chemistry and physics textbooks Most science curricula and textbooks provide the following advice to students Do not allow theories in contradiction with observations and all scientific theories must be formulated inductively based on experimental facts Feyerabend questioned this widely prevalent premise of science education in most parts of the world and in contrast gave the following advice Scientists can accept a hypothesis despite experimental evidence to the contrary and scientific theories are not always consistent with all the experimental data No wonder Feyerabend became a controversial philosopher and was considered to be against

rationalism and anti science Recent research in philosophy of science however has shown that most of Feyerabend s philosophical ideas are in agreement with recent trends in the 21st century Of the 120 articles from science education journals evaluated in this book only 9% recognized that Feyerabend was presenting a plurality of perspectives based on how science really works Furthermore it has been shown that Feyerabend could even be considered as a perspectival realist Among other aspects Feyerabend emphasized that in order to look for breakthroughs in science one does not have to be complacent about the truth of the theories but rather has to look for opportunities to break rules or violate categories Mansoor Niaz carefully analyses references to Feyerabend in the literature and displays the importance of Feyerabend s philosophy in analyzing historical episodes Niaz shows through this remarkable book a deep understanding to the essence of science Calvin Kalman Concordia University Canada In this book Mansoor Niaz explores the antecedents context and features of Feyerabend s work and offers a more nuanced understanding then reviews and considers its reception in the science education and philosophy of science literature This is a valuable contribution to scholarship about Feyerabend with the potential to inform further research as well as science education practice David Geelan Griffith University Australia
