Markus Hupfer and members of the team!

September 7, 2024

These are the notes for the first lecture, *Foundations of Cooling Theory*. These are generalised and give insights on problems for all of the cooling gases, from the perspective of the results on the lecture, the likely contribution to Cooling Theory and the needs of different and their possibilities of their cooling gases. I also used some other sources for additional material, such as Part II course book of Cambridge on Cooling Theory and Thermodynamics given by Professor John Kestin, and the other course notes from a Cambridge PhD on Sublimation Thermodynamics given by Professor Tim Gaskell. I also included some more about other's PhD course, Applied Maths for the Phys. Scientists, but not writing of the notes is based on their lecture notes given during "Applied Maths Course".

All numbers in these notes are my best!
