Master The Multiplication Tables Workbook:

Master the Multiplication Tables Workbook Maria Miller, 2016-01-15 The third grade workbook Master the Multiplication Tables concentrates on teaching the multiplication tables in a specific order It is a comprehensive teaching resource with lessons and exercises to introduce or review the multiplication tables The lessons include a way to drill a specific table but also have many other related exercises including word problems The book assumes that the students already know the concept of multiplication It is best preceded by my other workbook Multiplication Concept I have created a systematic approach to memorizing times tables In this method one table is studied at a time until it is mastered The individual tables are NOT studied in the order of 2 3 4 etc but instead the easy tables of 2 5 10 and 11 are studied first The study order also includes studying the table of 4 right after the table of 2 and studying the table of 6 right after the table of 3 because the skip counting patterns of those tables share some similarities The lessons emphasize the fact that one multiplication fact is always in two different tables This way when the student gets to the hardest tables the tables of 7 8 and 12 there are only a few totally new facts to learn We always start the study of each table by memorizing the skip counting pattern 7 14 21 28 etc Then we work on memorizing which fact is associated with which answer This way your students not only know what is 8×7 but also know all of it backwards that 56 is in the tables of 8 and 7 That knowledge will be an enormous help later when the students learn division factorizing and finding LCM s or GCF s The book also includes a 12x12 grid at the end of almost every lesson The boxes for those answers that have not been studied yet are shaded and are not to be filled Little by little the shaded areas become fewer and fewer and the progress is very visible to the student I encourage you also to use games for motivation and for practice I have included a list of online multiplication games for that purpose Of course board and card games are perfect as well However games are not enough in themselves The memorization also requires a mental effort from the student sitting down with the skip counting list then with the facts reading them and then trying to remember them The basic age old technique of covering the list and trying to remember it is still very effective I do not want to discount the value of songs or mnemonic devices but they tend to isolate the facts in the child s mind as separate odd trivia This book shows the patterns found in the multiplication tables in order to keep the facts in a structured context and emphasizes learning the tables backwards in order to facilitate learning division The book also includes a guide for the teacher titled Effective Oral Drilling This drilling is structured not random and is based on the pattern in the table itself Table of 2 11 new facts to learn Table of 4 10 new facts These are doubles of those in the table of two Table of 10 9 easy facts Table of 5 8 new facts More Practice and Review is a break from memorizing new tables Table of 3 7 new facts Table of 6 6 new facts These are doubles of those in the table of 3 Table of 11 5 new facts four of them are easy Table of 9 4 new facts Table of 7 3 new facts Table of 8 2 new facts Table of 12 1 new fact

Teach Your Child the Multiplication Tables, Fast, Fun and Easy -- Teacher's Editio Eugenia Francis,2013-08-22 Teach Your Child the Multiplication Tables Teacher s 2nd Edition Both the Student and Teacher s editions include the TeaChildMath tm teaching methodology The ONLY difference between these editions is an Answer Key with pages reduced to 1 4 size can be found at the back of the Teacher s edition Like most third graders my son found learning the multiplication tables through rote memorization a challenge After an afternoon of tiresome drills I knew there had to be a better way I drew a grid for tables 1 10 Not surprisingly Scott knew tables 1 2 5 and 10 the tables with easy patterns Well then why not find patterns for the rest of the tables Tables for EVEN numbers 2 4 6 and 8 we discovered end in some combination of 2 4 6 8 0

and are easy to learn Tables for ODD numbers we found also have distinct patterns Patterns made Scott smile He could see the underlying structure and knew he got it right The traditional method of learning one math fact at a time such as 8×6 is not only difficult but highly inefficient Rote memorization is passive and mechanical Students typically find it boring Why not learn one pattern for the entire table Discovering patterns is active creative and engaging The essence of mathematics is patterns Learning to recognize patterns at an early age develops analytical skills Patterns greatly benefit children with special needs such as those with ADD ADHD autism and dyslexia They can better recall and visualize the table when they see a pattern This is true for all children Patterns aid recall My workbook utilizes both left and right brain strategies to teach multiplication There are marked differences between children who are left hemisphere dominant and those who are right dominant Whereas the left hemisphere dominant child can construct the whole from the parts the right dominant prefers the big picture seeing patterns and making connections Special needs children are often right brain dominant Learning the multiplication tables is much easier when both hemispheres are engaged It is the responsibility of parents and teachers to ensure children learn the multiplication tables Without them a child will not progress beyond third grade math Fractions decimals percentages and algebra will be beyond a child's reach In California the number one reason students do not graduate from high school is failure to pass algebra A leading cause is failure to master the times tables It is a national disgrace that fifteen year olds in the U S rank near the bottom of industrialized nations in math skills We must reverse this alarming trend The time to intervene is in the third grade Teachers why not a more effective approach to the multiplication tables than the drill and kill of rote memorization Why not bring the magic of math into the classroom If all third graders were to genuinely like math they would be more likely to succeed in school Parents too must do their part Parents have a huge influence over a third grader By high school it may be too late Mastery of the multiplication tables is essential to your child's future My goal in writing this workbook is not only multiplication mastery for all children but to instill in them a love of numbers and fascination with math Free instructional TeaChildMath™ videos can be found on YouTube
