35 Gbps FPGA-based Network Processor Rui Pang, University of Texas at Dallas. Graduate Program in Electrical Engineering, 2012 With the need for packet processing in high throughput networks and the higher expense for high performance network processor low cost programmable Network Processors on FPGAs are gaining attention We utilize a hash function small size parallel CAMs and an external RAM to implement a high performance 35 Gbps network processor to handle 524 288 flows FPGAs are chosen to realize reconfigurable network processors for executing field upgrade In this thesis a hash function is proposed and implemented to analyze and route incoming packets to specific CAM architectures at high speed with low overhead To match incoming packets with pre stored flows a parallel structure of CAMs is proposed to meet the high speed requirements In order to provide a low cost and low power consuming solution an external RAM is used instead of large size expensive CAMs to store a large amount of
