Sound Topology, Duality, Coherence and Wave-Mixing Pierre Deymier, Keith Runge, 2017-08-12 This book offers an essential introduction to the notions of sound wave topology duality coherence and wave mixing which constitute the emerging new science of sound It includes general principles and specific examples that illuminate new non conventional forms of sound sound topology unconventional quantum like behavior of phonons duality radical linear and nonlinear phenomena associated with loss and its control coherence and exquisite effects that emerge from the interaction of sound with other physical and biological waves wave mixing The book provides the reader with the foundations needed to master these complex notions through simple yet meaningful examples General principles for unraveling and describing the topology of acoustic wave functions in the space of their Eigen values are presented These principles are then applied to uncover intrinsic and extrinsic approaches to achieving non conventional topologies by breaking the time reversal symmetry of acoustic waves Symmetry breaking can impart topological immunity to wave degradation from imperfection scattering and catalyze controlled coherence In the intrinsic case and the phonon representation of acoustic waves the self interaction interference of a wave through its supporting medium exposes the notion of duality in the quantum statistics i e boson vs fermion characterized by the symmetry of multiple particle states and how the quantum analogue behaviors of sound can be exploited in the form of novel sound based information transfer and processing devices By considering media that mix different types of waves the book addresses the interaction of sound with other physical and biological waves but also brings to light examples of extrinsic processes that can lead to symmetry breaking The coherent conversion of sound into other types of waves as well as the sound induced non conventional topology of elastic electronic spin and biological waves are presented in the case of media exhibiting elasto electronic photo elastic magneto elastic effects and biological mechano transduction
