while for the most part we learn from experiences machines learn from data Starting from scratch Python Machine Learning
explains how this happens how machines build their experience and compounding knowledge Data forms the core of Machine
Learning because within data lie truths whose depths exceed our imagination The computations machines can perform on
data are incredible beyond anything a human brain could do Once we introduce data to a machine learning model we must
create an environment where we update the data stream frequently This builds the machine s learning ability The more data
Machine Learning models are exposed to the easier it is for these models to expand their potential Some of the topics that we
will discuss inside include What is Machine Learning and how it is applied in real world situations Understanding the
differences between Machine Learning Deep Learning and Artificial Intelligence Supervised learning unsupervised learning
