Offering both a conceptual framework and detailed implementation guidelines, the work is designed to support a Methods of Teaching Computer Science (MTCS) course but may be applied to the teaching of any area of computer science at any level from elementary school to university. This text is not limited to any specific curriculum or programming language but instead suggests various options for lesson and syllabus organization. Fully updated and revised, the third edition features more than 40 new activities, bringing the total to more than 150, together with new chapters on computational thinking, data science, and soft concepts and soft skills. This edition also introduces new conceptual frameworks for teaching, such as the MERge model, and new formats for the professional development of computer science educators. Topics and features include an extensive set of activities to further support the pedagogical principles outlined in each chapter, discusses educational approaches to computational thinking, how to address soft concepts and skills in a MTCS course, and the pedagogy of data science. NEW focuses on teaching methods, lab-based teaching, and research in computer science education, as well as on problem-solving strategies, examines how to recognize and address learners' misconceptions, and the different types of questions teachers can use to vary their teaching methods. Provides coverage of assessment, teaching, planning, and designing a MTCS course, reviews high school teacher preparation programs, and how prospective teachers can gain experience in teaching computer science.
