Cloud Computing Additional Opportunities and Savings Need to Be Pursued United States Government Accountability, 2015-06-26

Over the last 15 years the federal government's increasing demand for IT has led to a dramatic rise in operational costs to develop, implement and maintain systems and services. Annually the federal government spends more than 80 billion on IT. While the use of IT has the potential to greatly improve service for federal employees and American taxpayers, it has also led to federal agencies' reliance on custom IT systems that can and have become risky, costly and unproductive mistakes.

Cloud Computing Roadmap Jeong Chun Phuoc, Fazly Salleh Abas, Abrar Yusuf, 2012

Cloud Computing technology represents the next quantum leap in internet super technology of the 21st century. In a knowledge base economy, two primary facets of Cloud Computing technology are Internal Cloud Computing (ICC) and External Cloud Computing (ECC) Systems. In Malaysia, both Private Cloud Computing (pCC) and Public Cloud Computing (pCC) options are being concurrently assessed from both economic and security aspects for strategic implementation and adoption in the industry domain. In the design of a strategic roadmap, various Cloud Computing Frameworks are being reviewed. Of particular interest is the U.S. Commerce Department's National Institute of Standards and Technology (NIST) Cloud Computing Roadmap, which is being studied by various governments for adoption and implementation at domestic national level. This includes Malaysia and its Cloud Computing Blueprint. However, not all the strategic thrusts and terms as drafted in the US NIST are conducive for national implementation in Malaysia. Malaysia's Cloud Computing Roadmap manifests different and unique national economic requirements taking into account several security input factors. Besides the Internal Cloud Computing (ICC) and External Cloud Computing (ECC) options, other Open Cloud Computing systems are being considered as well in conjunction.
