Modelling and Optimization of Photovoltaic Cells, Modules, and Systems Carlos David Rodríguez Gallegos,2021-04-28 This book presents a study to determine the current limitations in the area of Photovoltaics PV as a source of renewable energy and proposes strategies to overcome them by applying optimization approaches in three main areas namely related to photovoltaic solar cells modules and systems These include grid metallization design of Si based solar cells and modules cost effectiveness analysis between Si based monofacial and bifacial grid connected PV systems optimal diesel replacement strategy for the progressive introduction of PV and batteries dispatch strategy optimization for PV hybrid systems in real time The novelty of the work presented in this book is of high interest to the scientific community but also to the PV manufacturers installation companies and investors

Photovoltaics for Sustainable Electricity and Buildings Ali Sayigh,2016-12-01 This leading edge volume on advances in photovoltaic technology features diverse contributions from experts in every major geographic PV market It examines emerging applications such as electricity grid load balancing and demand response PV storage systems photovoltaic thermal solar collectors and carbon offset in buildings Engineers researchers developers and students alike will find new avenues for exploration and fresh insights into this continually evolving field Highlights the most recent advances in Photovoltaics from Next Gen Storage Systems to Bifacial PV T Solar Collectors Provides expert insights on the recent evolution and near future of PV markets around the globe Covers applications from grid tied storage and power generation to green buildings

Amorphous Silicon Solar Cells with Graded Low-level Doped I-layers characterized by Bifacial Measurements , Bifacial spectral response characterization of solar cells under near operating condition illumination is used in conjuncture with a novel bifacial DICE analysis to establish the collection efficiency as a function of i layer position in p i n amorphous silicon solar cells A significant portion of solar cell degradation can be explained in terms of electric field distortions which increase recombination losses Unlike carrier lifetime reductions the field distortions can be reduced The numerical model is used to guide the intentional doping of the i layer to counteract the field distortions caused by charged dangling bonds and thus to optimize the electric field for the degraded state Solar cells with graded low level boron doping in the i layer are analysed in detail Increasing conversion efficiency during light soaking and enhanced stabilized n side performance show the viability of the electric field optimization
