Becoming a Computer Musician Jeffrey H. Bowen,Jeff Bowen,1994 This book introduces and explains the principles of using computers for exploration composition and production of music The book shows how easily and successfully computers and music can be integrated for hobby educational and professional applications CD ROM includes special Windows and Mac versions of major music software a sample from Peter Gabriel s interactive CD ROM and much more [Electroacoustic Music in East Asia](#) Marc Battier,Kenneth Fields,2020-06-09 This book illuminates the development of electronic and computer music in East Asia presented by authors from these countries and territories China Japan Korea and Taiwan The scholars bring forward the cultural complexities and conflicts involved in their diverse encounters with new music technology and modern aesthetics How electronic music attracted the interest of composers from East Asia is quite varied while composers and artists in Japan delved into new sounds and music techniques and fostered electronic music quite early on

political sociological and artistic conditions pre-empted the adoption of electronic music techniques in China until the last two decades of the twentieth century. Korean and Taiwanese perspectives contribute to this rare opportunity to re-examine under a radically different set of cultural preconditions the sweeping musical transformation that similarly consumed the West. Special light is shed on prominent composers such as Sukhi Kang, Toshiro Mayuzumi, Toru Takemitsu, and Xiaofu Zhang. Recent trends and new directions which are observed in these countries are also addressed, and the volume shows how the modern fusion of music and technology is triangulated by a depth of culture and other social forces. This book was originally published as a special issue of *Contemporary Music Review*.

Computers in Music Education Andrew Brown, Andrew R. Brown, 2012-09-10. *Computers in Music Education* addresses the question of how computer technologies might best assist music education. For current and preservice music teachers and designed as a development tool, reference resource, and basic teaching text, it addresses pedagogical issues and the use of computers to aid production and presentation of students' musical works. Written by a music educator and digital media specialist, it cuts through the jargon to present a concise, easy-to-digest overview of the field, covering notation software, MIDI, sound creation, downloading music, posting personal MP3s for mass distribution. While there are many more technical books, few offer a comprehensive, understandable overview of the field. *Computers in Music Education* is an important text for the growing number of courses in this area.

[Introduction To Digital Signal Processing: Computer Musically Speaking](#) Tae Hong Park, 2009-11-10. This book offers an introduction to digital signal processing (DSP) with an emphasis on audio signals and computer music. It covers the mathematical foundations of DSP, important DSP theories including sampling, LTI systems, the z transform, FIR/IIR filters, classic sound synthesis algorithms, various digital effects, topics in time and frequency domain analysis, synthesis, and associated musical sound examples. Whenever possible, pictures and graphics are included when presenting DSP concepts of various abstractions. To further facilitate understanding of ideas, a plethora of MATLAB code examples are provided, allowing the reader tangible means to connect dots via mathematics, visuals, as well as aural feedback through synthesis and modulation of sound. This book is designed for both technically and musically inclined readers alike, folks with a common goal of exploring digital signal processing.

The Routledge Companion to Music, Technology, and Education Andrew King, Evangelos Himonides, S. Alex Ruthmann, 2017-01-20. *The Routledge Companion to Music Technology and Education* is a comprehensive resource that draws together burgeoning research on the use of technology in music education around the world. Rather than following a procedural 'how to' approach, this companion considers technology, musicianship, and pedagogy from a philosophical, theoretical, and empirically driven perspective, offering an essential overview of current scholarship while providing support for future research. The 37 chapters in this volume consider the major aspects of the use of technology in music education.

Part I: Contexts. Examines the historical and philosophical contexts of technology in music. This section addresses themes such as special education, cognition, experimentation, audience engagement, gender, and information and communication.
