A Byte Of Python Swaroop Ch:

A Byte of Python C. H. C H Swaroop, James Zimmerhoff, 2017-10-02 The programming language Python was conceived in the late 1980s 1 and its implementation was started in December 1989 2 by Guido van Rossum at CWI in the Netherlands as a successor to the ABC programming language capable of exception handling and interfacing with the Amoeba operating system 3 Van Rossum is Python's principal author and his continuing central role in deciding the direction of Python is reflected in the title given to him by the Python community Benevolent Dictator for Life BDFL 4 5 Python was named for the BBC TV show Monty Python's Flying Circus 6 Python 2.0 was released on October 16 2000 with many major new features including a cycle detecting garbage collector in addition to reference counting for memory management and support for Unicode However the most important change was to the development process itself with a shift to a more transparent and community backed process 7 Python 3.0 a major backwards incompatible release was released on December 3 2008 8 after a long period of testing Many of its major features have also been backported to the backwards compatible Python 2.6 and 2.7 9 In February 1991 van Rossum published the code labeled version 0.9.0 to alt.sources 10 Already present at this stage in development were classes with inheritance exception handling functions and the core datatypes of list dict str and so on Also in this initial release was a module system borrowed from Modula-3 Van Rossum describes the module as one of Python's major programming units 1 Python's exception model also resembles Modula-3's with the addition of an else clause 3 In 1994 comp.lang.python the primary discussion forum for Python was formed marking a milestone in the growth of Python's userbase 1 Python reached version 1.0 in January 1994 The major new features included in this release were the functional programming tools lambda map filter and reduce Van Rossum stated that Python acquired lambda reduce filter and map courtesy of a Lisp hacker who missed them and submitted working patches 11 The last version released while Van Rossum was at CWI was Python 1.2 In 1995 Van Rossum continued his work on Python at the Corporation for National Research Initiatives CNRI in Reston Virginia whence he released several versions By version 1.4 Python had acquired several new features Notable among these are the Modula-3 inspired keyword arguments which are also similar to Common Lisp's keyword arguments and built in support for complex numbers Also included is a basic form of data hiding by name mangling though this is easily bypassed 12 During Van Rossum's stay at CNRI he launched the Computer Programming for Everybody CP4E initiative intending to make programming more accessible to more people with a basic literacy in programming languages similar to the basic English literacy and mathematics skills required by most employers Python served a central role in this because of its focus on clean syntax it was already suitable and CP4E's goals bore similarities to its predecessor ABC The project was funded by DARPA 13 As of 2007 the CP4E project is inactive and while Python attempts to be easily learnable and not too arcane in its syntax and semantics reaching out to non programmers is not an active concern 14 Here are what people are saying about the book This is the best beginner's tutorial I've ever seen Thank you for your effort Walt
