

Five Powerful Memory-Boosting Learning Strategies

5. METACOGNITION

Provide opportunities for self-monitoring, self-testing, and self-explanation.

Examples: Use learning journals, reflection activities, self-assessments, goal setting, and think-aloud protocols for learners to verbalize their thought process as they work through problems.

4. SPACED REPETITION

Optimize learning by reviewing material at increasing intervals over time.

Examples: Design progressive learning modules, flashcards with spaced repetition algorithms, adaptive quizzes, and spaced review prompts or reminders to learners at strategic intervals.

3. INTERLEAVED PRACTICE

Mix different topics or skills during practice sessions.

Examples: Include case studies that involve decision-making, strategic planning, and financial analysis, or language exercises that test vocabulary, comprehension, and sentence completion.

1. VISUAL MNEMONICS

Associate new information with vivid mental images.

Examples: Include acronyms (STEM) and acrostics (PEMDAS), mind maps and concept maps, imagery, diagrams, and memory palaces (associate information with specific locations in a mental map).

2. DUAL CODING

Use both verbal and visual representations of information.

Examples: Pair written explanations with diagrams, charts, and graphic visualizers; Use interactive whiteboard exercises or infographics, and virtual lab simulations with annotations.

Learning and Memory Mark A. Gluck, Eduardo Mercado, Catherine E. Myers, 2016-03-14 With its modular organization consistent chapter structure and contemporary perspective this groundbreaking survey is ideal for courses on learning and memory and is easily adaptable to courses that focus on either learning or memory Instructors can assign the chapters they want from four distinctive modules introduction learning memory and integrative topics with each chapter addressing behavioral processes then the underlying neuroscience then relevant clinical perspectives The book is further distinguished by its full color presentation and coverage that includes comparisons between studies of human and nonhuman brains The new edition offers enhanced pedagogy and more coverage of animal learning

Learning and Memory W. Scott Terry, 2023-05-25 Learning and Memory provides a balanced review of the core methods and the latest research on animal learning and human memory Topical coverage ranges from the basic and central processes of learning including classical and instrumental conditioning and encoding and storage in long term memory to topics not traditionally covered such as spatial learning motor skills and implicit memory The general rules of learning are reviewed along with the exceptions limitations and best applications of these rules Alternative approaches to learning and memory including cognitive neuroscientific functional and behavioral are also discussed Individual differences in age gender learning abilities and social and cultural background are explored throughout the text and presented in a dedicated chapter The relevance of basic principles is highlighted throughout the text with everyday examples that ignite reader interest in addition to more traditional examples from human and animal laboratory studies Research examples are drawn from education neuropsychology psychiatry nursing and ecological or everyday memory Each chapter begins with an outline and concludes with a detailed summary Applications and extensions are showcased in text boxes as well as in distinct applications sections in every chapter and review and recapitulation sections are interspersed throughout the chapters

Impact of Diet on Learning, Memory and Cognition Amy Claire Reichelt, Margaret J. Morris, R. Fred Westbrook, 2017-08-22 Changes in food composition and availability have contributed to the dramatic increase in obesity over the past 30 40 years in developed and increasingly in developing countries The modern diet now contains many foods that are rich in saturated fat and refined sugar People who eat excessive amounts of this diet are not only likely to become overweight even obese develop metabolic and cardiovascular diseases some forms of cancer but also undergo a more rapid rate of normal age related cognitive decline and more rapid progression of neurological diseases such as dementia A central problem is why people persist in consuming this diet in spite of its adverse health effects and when alternative food choices are available As high fat high sugar foods are inherently rewarding eating for pleasure like taking psychoactive drugs can modulate reward neurocircuitry causing changes in responsiveness to reward predicting stimuli and incentive motivation Indeed the excessive ingestion in modern societies and the resulting obesity epidemic may be viewed as a form of food addiction Thus a diet high in palatable foods is proposed

to impact upon reward systems in the brain modulating appetitive learning and altering reward thresholds Impairments in other forms of cognition have been associated with obesity and these have a rapid onset The hippocampus appears to be particularly vulnerable to the detrimental effects of high fat and high sugar diets Recent research has shown that as little as one week of exposure to a high fat high sugar diet leads to impairments in place but not object recognition memory in the rat Excess sugar alone had similar effects and the detrimental effects of diet consumption was linked to increased inflammatory markers in the hippocampus a critical region involved in memory Furthermore obesity related inflammatory changes have also been described in the human brain that may lead to memory impairments These memory deficits may contribute to pathological eating behaviour through changes in the amount consumed and timing of eating The aim of this eBook is to present up to date information about the impact of diet and diet induced obesity on reward driven learning memory and cognition encompassing both animal and human literature and also potential therapeutic targets to attenuate such deficits
