The importance of the structures of the construction market for the implementation of the BIM method in an international comparison Esra Korff, 2019-07-24 Master s Thesis from the year 2019 in the subject Engineering Civil Engineering Technical University of Braunschweig Institut f r Bauwirtschaft und Baubetrieb language English abstract Why is Germany behind the UK US and Finland in BIM and how can Germany catch up again Over the years of the rise of BIM numerous scientific papers have been written in various countries about structural barriers to BIM Sometimes about structural barriers that exist in certain countries like Becerik Gerber Rice s 2010 The perceived value of building Information Modeling in the U S Building Industry structural barriers that exist in certain areas like Jeong et al s 2015 BIM acceptance model in construction organisations or general investigations in structural barriers to BIM like Azahr et al s 2017 Building Information Modelling BIM uptake Clear benefits understanding its implementation risks and challenges Scientific papers about structural barriers to BIM in Germany are however still rare and mostly in form of statistics such as Braun et al 2015 To conduct a comprehensive search for structural barriers to BIM and corresponding solutions in Germany an individual approach is hence chosen In a broad international literature review potential structural barriers to BIM are identified from different sources such as the ones named above On the basis of such possible barriers to BIM a comparison of Germany with the BIM leading countries UK US and Finland is conducted This shall reveal what structural barriers are in effect in Germany that are non existent or already overcome in the other countries to derive corresponding suggestions for Germany Where a differentiation between market participants is necessary in this work the focus is put on contractors To conduct this research the course of this work is chosen as the following It starts in the second chapter with a roundup about BIM and its potential to provide a common information base for this work In the third chapter it is then documented how the UK US and Finland

are ahead of Germany with regard to BIM As the reasons for these countries advantage are to be found in a comparison with Germany the methodology for such case study analysis is developed in the fourth chapter Following this methodology possible structural barriers to BIM of a countries AEC industry are identified in the fifth chapter In the sixth chapter the UK US and Finland are compared with Germany according to these identified structural barriers to find out where significant differences exist

**Getting to Grips with BIM** James Harty, Tahar Kouider, Graham Paterson, 2015-12-14 With the UK government's 2016 BIM threshold approaching support for small organisations on interpreting filtering and applying BIM protocols and standards is urgently required Many small UK construction industry supply chain firms are uncertain about what Level 2 BIM involves and are unsure about taking first steps towards having BIM capability As digitisation increasingly impacts on work practices Getting to Grips with BIM offers an insight into an industry in change supplemented by practical guidance on managing the transition towards more widespread and integrated use of digital tools to manage the design construction and whole life use of buildings

**Building Information Modeling** Régine Teulier, Marie Bagieu, 2024-01-24 This book presents how Building Information Modeling BIM and the use of shared representation of built assets facilitate design construction and operation processes ISO 19650 The modeling of public works data disrupts the art of construction Written by both academics and engineers who are heavily involved in the French research project Modélisation des Informations Interopérables pour les Infrastructures Durables MINnD as well as in international standardization projects this book presents the challenges of BIM from theoretical and practical perspectives It provides knowledge for evolving in an ecosystem of federated models and common data environments which are the basis of the platforms and data spaces BIM makes it possible to handle interoperability very concretely using open standards which lead to openBIM The use of a platform allows for the merging of business software and for approaches such as a Geographic Information System GIS to be added to the processes In organizations BIM meets the life cycles of structures and circular economy It is not only a technique that reshapes cooperation and trades around a digital twin but can also disrupt organizations and business models
