 - b. As a cell grows, its surface area – to – volume ratio decreases.
 - c. As a cell's volume grows, its membrane needs more and more surface area to bring nutrients, oxygen, and water into the cell and move waste out. The cell's surface area – to – volume ratio shows how much area is available to move materials in and out of the cell compared to the cell's volume.
2.
 - a. Asexual reproduction is the production of offspring from only one parent. Sexual reproduction is the production of offspring from two parents.
 - b. Most animals and plants reproduce sexually, as do some single-celled organisms.
 - c. Asexual reproduction occurs rapidly, enabling a population to increase rapidly; however, the offspring are genetically identical and may not survive a change in the environment. Sexual reproduction takes longer, so a population doesn't grow fast; however, the offspring have a mix of genetic material from two parents that might help the population survive if the environment changes.
