**2.5 The Demographic Transition Model**

**Demographic Transition Model**

The Demographic Transition Model (DTM) is a model that describes the changes in population growth and development over time. It is divided into five stages: Stage 1, Stage 2, Stage 3, Stage 4, and Stage 5.

**Stage 1**

Stage 1 is the only stage with a high birth rate and a high death rate. Because of this, the natural increase rate is close to zero. The population grows slowly because the death rate is high and the birth rate is high. The birth rate and the death rate are both high because of high infant mortality.
