Sides,2020-04-29 Within the framework of New Literacy Studies Dirk Remley presents a historical study of how technical
communication practices at a World War II arsenal sponsored literacy within the community in which it operated from 1940
to 1960 and contemporary implications of similar forms of sponsorship The Training within Industry TWI methods developed
by the U S government and industry at that time included multimodal literate practices particularly combinations of visual
oral experiential and print linguistic text Analyses reveal a hierarchy in which print linguistic literacies were generally
esteemed at the workplace and in the community This literacy hierarchy contributed to a catastrophic accident that killed 11
people prompting changes in the approach to designing certain training documents This book links technical communication
especially the multimodal forms of representation commonly found in technical communication and instructional materials to
the concept of literacy sponsorship The TWI methods used in training and system improvement during World War II are
currently applied in business and industry as part of the lean operating and continuous improvement philosophies These
methods have also become part of the experiential learning philosophy favored in academia Remley includes examples of
current applications of multimodal forms of technical communication similar to those used at the arsenal as well as new
media related applications related to training and instruction He also discusses their implications for literacy sponsorship
