From Neuron to Brain John G. Nicholls, A. Robert Martin, Paul A. Fuchs, David A. Brown, Mathew E. Diamond, David A. Weisblat, 2012-02-29 The fifth edition of From Neuron and Brain has been thoroughly rewritten with new chapters added to provide a readable up to date book for use in undergraduate graduate and medical school courses in neuroscience As in previous editions the emphasis is on experiments made by electrical recordings molecular and cellular biological techniques and behavioral studies on the nervous system from simple reflexes to cognitive functions Lines of research are followed from the inception of an idea to new findings being made in laboratories and clinics today A major change is that this edition begins with the anatomy and physiology of the visual system from light receptors in the retina to the perception of images This allows the reader to appreciate right away how nerve cells act as the building blocks for perception Detailed mechanisms of signaling are then described in later chapters For adopting lecturers an Instructor Resource Library is available please email lecturerservices@palgrave.com

From Neuron to Brain Robert Martin, 2020 For the instructor of Introduction to Neuroscience or Neurobiology courses with students who are intimidated by the study of the brain our textbook From Neuron to Brain is designed to present difficult material on the nervous system through the process of experimentation Lines of research are followed from the inception of an idea to new findings being made in laboratories and clinics today allowing students to follow the path of experimentation toward an understanding of how the nervous system works Nicholls et al have built a readable and informative text that explains how nerve cells go about their business of transmitting signals how the signals are put together and how higher function emerges from this integration all in an accessible and exciting way that will appeal to students From Neuron to Brain Sixth Edition and its exploration of the intricate workings of the nervous system will be of interest to instructors teaching undergraduate graduate and medical school courses in neuroscience

Closed Loop Neuroscience Ahmed El Hady, 2016-09-08 Closed Loop Neuroscience addresses the technical aspects of closed loop neurophysiology presenting the implementation of these approaches spanning several domains of neuroscience from cellular and network neurophysiology through sensory and motor systems and then clinical therapeutic devices Although closed loop approaches have long been a part of the neuroscientific toolbox these techniques are only now gaining popularity in research and clinical applications As there is not yet a comprehensive methods book addressing the topic as a whole this volume fills that gap presenting state of the art approaches and the technical advancements that enable their application to different scientific problems in neuroscience Presents the first volume to offer researchers a comprehensive overview of the technical realities of employing closed loop techniques in their work Offers application to in vitro in vivo and hybrid systems Contains an emphasis on the actual techniques used rather than on specific results obtained Includes exhaustive protocols and descriptions of software and hardware making it easy for readers to implement the proposed methodologies Encompasses

the clinical neuroprosthetic aspect and how these systems can also be used to contribute to our understanding of basic neurophysiology Edited work with chapters authored by leaders in the field from around the globe the broadest most expert coverage available
