This book gathers the peer reviewed proceedings of the 14th International Symposium PRADS 2019 held in Yokohama Japan in September 2019. It brings together naval architects, engineers, academic researchers and professionals who are involved in ships and other floating structures to share the latest research advances in the field. The contents cover a broad range of topics including design synthesis for ships and floating systems, production hydrodynamics and structures and materials. Reflecting the latest advances, the book will be of interest to researchers and practitioners alike. HSMV 2023 Ermina Begovic, 2023-11-15. A growing awareness for sustainable mobility and the importance of reducing greenhouse gas emissions call for immediate action in the maritime industry. Technical improvements such as the hydrodynamic optimization innovations in energy saving devices, new propulsion systems and power supplies can contribute to such achievements. This challenge is even more demanding for high speed marine craft. This book presents the proceedings of HSMV2023, the 13th International Symposium on High Speed Marine Vehicles held from 23 to 25 October 2023 in Naples, Italy. The conference attracts academics, researchers, designers, operators and shipowners. It provides a platform for the presentation and discussion of developments in the design, construction and operation of high speed marine vessels. More than 40 submissions were received, 27 papers were selected for presentation and publication in this book after a rigorous review process. The book provides an overview of current innovations and developments and can be a reference for all those working in the field of high speed marine vehicles. Practical Ship Hydrodynamics Volker Bertram, 2012. *Practical Ship Hydrodynamics* provides a comprehensive overview of hydrodynamic experimental and numerical methods for ship resistance and propulsion, maneuvering, seakeeping and vibration. Beginning with an overview of problems and approaches including the basics of modeling and full scale testing, expert author Volker Bertram introduces the marine applications of computational fluid dynamics and boundary element methods. Expanded and updated, this new edition includes otherwise disparate information on the factors affecting ship hydrodynamics combined to provide one practical go-to resource. Full coverage of new developments in computational methods and model testing techniques relating to marine design and development. New chapters on hydrodynamic aspects of ship vibrations and hydrodynamic options for fuel efficiency and increased coverage of simple design estimates of hydrodynamic quantities such as resistance and wake fraction. With a strong focus on essential background for real life modeling, this book is an ideal reference for practicing naval architects and graduate students.
