Dieffenbachia plants usually grow well without fertilizer. A student wanted to see if adding liquid fertilizer would make a difference in the growth of the plant. Three plants were placed in the same type of pot with the same type of soil. Two plants received fertilizer and one plant did not. All plants received the same amount of light and water during the experiment. She watched the plants grow over a period of 30 days, only adding the same amount of water to each plant on a weekly basis. Look at the table below and answer the questions which follow concerning the student's experiment.

	Amount of Fertilizer Added to Plants			
Plant	0ml	10ml	20ml	Growth
1	X			10 cm
2		X		20 cm
3			X	40 cm

*Response Surface Methodology* Raymond H. Myers, Douglas C. Montgomery, 1995-09-12 The primary objective of response surface methodology is to aid the statistician and other users of statistics in applying response surface procedures to appropriate problems in many technical fields. Although methods are emphasized in the book, a certain amount of theory is presented so that a reader with sufficient background in mathematics, especially in the algebra of matrices, can obtain an exposure to the theoretical development. While response surface techniques are widely used, it seems that a need exists for an exposition which contains a considerable amount of the basic material under a single cover. At the time it is felt, this book may create a continued awareness of the basic techniques among the potential users.
