Short Answer

1. Describe the stages of primary succession and compare primary succession and secondary succession.

Primary succession is the orderly sequence of life moving into an otherwise lifeless area for the first time (newly formed island). Secondary succession is the same except that life once existed there but was wiped out (volcano, fire, logging).

2. Describe the curve to the right, and explain what is happening at each of the numbered steps. What is the name of step 3?

- ① we start with low numbers but they are growing exponentially
- ② the numbers are increasing very rapidly (exponential growth)
- ③ limiting factors cause the reproduction rates to slow this is carrying capacity.

3. Describe the Predator-Prey Cycle and use the graph of lynx and hare populations to help your explanation.

Prey numbers rise first, then predator numbers follow. When predators are too high the prey decreases rapidly which leaves inadequate food for the predators so they also drop.
