*Deep-Sea Food Chains and the Global Carbon Cycle* G.T. Rowe,Vita Pariente,2012-12-06

Carbon dioxide and other greenhouse gases are increasing in the atmosphere due to the burning of fossil fuels the destruction of rain forests etc leading to predictions of a gradual global warming which will perturb the global biosphere An important process which counters this trend toward potential climate change is the removal of carbon dioxide from the surface ocean by photosynthesis This process packages carbon in phytoplankton which enter the food chain or sink into the deep sea Their ultimate fate is a rain of organic debris out of the surface mixed layer of the ocean On a global scale the mechanisms and overall rate of this process are poorly known The authors of the 25 papers in this volume present their state of the art approaches to quantifying the mechanisms by which the rain of biogenic debris nourishes deep ocean life Prominent deep sea ecologists geochemists and modelers address relationships between data and models of carbon fluxes and food chains in the deep ocean An attempt is made to estimate the fate of carbon in the deep sea on a global scale by summing up the utilization of organic matter among all the populations of the abyssal biosphere Comparisons are made between these ecological approaches and estimates of geochemical fluxes based on sediment trapping one dimensional geochemical models and horizontal physical input from continental margins Planning interdisciplinary enterprises between geochemists and ecologists including new field programs are summarized in the final chapter The summary includes a list of the important gaps in understanding which must be addressed before the role of the deep sea biota in global scale processes can be put in perspective

Conceptual Modeling ER'99 Jacky Akoka,Mokrane Bouzeghoub,Isabelle Comyn-Wattiau,Elisabeth Metais,2003-07-31 This book provides a comprehensive state of the art in conceptual modeling It grew out of research papers presented at the 18th International Conference on Conceptual Modeling ER 99 and arranged by the editors The plan of the conference is to cover the whole spectrum of conceptual modeling as it relates to database and information systems design and to offer a complete coverage of data and process modeling database technology and database applications The aim of the conference and of these proceedings is to present new insights related to each of these topics This book contains both selected and invited papers The 33 selected papers are organized in 11 sessions encompassing the major themes of the conference especially schema transformation evolution and integration temporal database design views and reuse in conceptual modeling advanced conceptual modeling business process modeling and workflows data warehouse design Besides the selected papers 3 invited papers present the views of three keynote speakers internationally known for their contribution to conceptual modeling and database research and for their active role in knowledge dissemination Peter Chen presents the results of his ongoing research on ER model XML and the Web Georges Gardarin presents the first results of an ESPRIT project federating various data sources with XML and XML QL Finally Matthias Jarke develops a way to capture and evaluate the experiences gained about process designs in so called process data warehouses
