Semantic

Modeling and Interoperability in Product and Process Engineering Yongsheng Ma, 2013-06-06 In the past decade feature based design and manufacturing has gained some momentum in various engineering domains to represent and reuse semantic patterns with effective applicability However the actual scope of feature application is still very limited Semantic Modeling and Interoperability in Product and Process Engineering provides a systematic solution for the challenging engineering informatics field aiming at the enhancement of sustainable knowledge representation implementation and reuse in an open and yet practically manageable scale This semantic modeling technology supports uniform multi facet and multi level collaborative system engineering with heterogeneous computer aided tools such as CAD/CAM CAE and ERP This presented unified feature model can be applied to product and process representation development implementation and management Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real world scenarios By expanding on well known feature based design and manufacturing approach Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers practitioners and students from both academia and engineering field

Industrial Chemical Process Analysis and Design Mariano Martín Martín, 2025-12-08 Industrial Chemical Process Analysis and Design Second Edition uses chemical engineering principles to explain the transformation of basic raw materials into major chemical products The book discusses traditional processes to create products like nitric acid sulphuric acid ammonia and methanol as well as more novel products like bioethanol and biodiesel In addition to providing full code and datasets for download detailed discussion of advanced in technology this edition also contains three new chapters Firstly covering polymers including H and L D PE PMMA PC biobased and full analysis of each including full code for modelling across popular software Secondly evaluating phosphoric acid production and fertilizers and Finally the third new chapter focuses on blast furnaces outlining not only the traditional technologies using C as reducing agent but also analysis of novel technologies using hydrogen This book will be a comprehensive guide to students and academics working with the latest techniques in process optimization at graduate level and above including some upper undergraduate researchers This book will also be very valuable for academics looking to teach or lecture in chemical process engineering This books will also be a very useful resource for anyone within the process industry to introduce the analysis of novel technologies as well as the modelling examples including recent software such as python gProms or even Excel or Matlab to solve reactor modelling and units operation but also process simulators applied to typical chemical processes Integrates principles of chemical engineering unit operations and chemical reactor engineering to understand process synthesis and analysis Includes historical perspectives and traces the improving efficiencies of commercially important chemical production processes Provides a systematic analysis of the processes building on thermodynamics kinetics mass and energy balances reactor engineering and unit operations Details different software packages to solve the examples from general purpose ones such as EXCEL or new ones like Python to specialized ones such

as process simulators CHEMCAD or gProms Features worked examples and end of chapter problems with solutions to show the application of concepts discussed in the text
