Chapter 1.1, Problem 1E

Snell's Law:

When the refracted ray lies in the plane of incidence, then the refraction angle is related to the angle of incidence by the relation:

$$n_1 \sin \theta_1 = n_2 \sin \theta_2$$

Here, θ_1 is the angle of incidence, θ_2 is the angle of refraction, n_1 and n_2 are the refractive index of the two media.

Fermat's Principle:

As per Fermat's principle, light rays travel along the path of least time.

Refer to figure 1.1-4 (construction to prove Snell's law) of the text book.

The time to travel between the two points say A and C is the distance in each medium divided by the speed of light in the medium.

$$t = \frac{AB}{c_1} + \frac{BC}{c_2} \dots (1)$$

Here, t is the time of travel, c_1, c_2 are the speed of light in medium 1 and medium 2 respectively and AB, BC are the paths of ray travel.

The speed of light in a given medium can be written in terms of speed of light in vacuum. Write the formula for refractive index.

$$n = \frac{c_0}{c}$$
$$c = \frac{c_0}{n}$$

Here, n is the refractive index of the medium, c_0 is the speed of light in vacuum and c is the speed of light in the medium.

Substitute $\frac{c_0}{n_1}$ for c_1 and $\frac{c_0}{n_2}$ for c_2 in equation (1).

$$t = \frac{AB}{c_0/n_1} + \frac{BC}{c_0/n_2}$$

Refer to figure 1.1-4 (construction to prove Snell's law) of the text book. From geometry of the figure,

substitute $\frac{d_1}{\cos \theta_1}$ for AB and $\frac{d_2}{\cos \theta_2}$ for BC .

$$t = \frac{n_1 \left(\frac{d_1}{\cos \theta_1} \right)}{c_0} + \frac{n_2 \left(\frac{d_2}{\cos \theta_2} \right)}{c_0}$$

Statistics for Imaging, Optics, and Photonics Peter Bajorski, 2011-09-26 A vivid hands on discussion of the statistical methods in imaging optics and photonics applications In the field of imaging science there is a growing need for students and practitioners to be equipped with the necessary knowledge and tools to carry out quantitative analysis of data Providing a self contained approach that is not too heavily statistical in nature Statistics for Imaging Optics and Photonics presents necessary analytical techniques in the context of real examples from various areas within the field including remote sensing color science printing and astronomy Bridging the gap between imaging optics photonics and statistical data analysis the author uniquely concentrates on statistical inference providing a wide range of relevant methods Brief introductions to key probabilistic terms are provided at the beginning of the book in order to present the notation used followed by discussions on multivariate techniques such as Linear regression models vector and matrix algebra and random vectors and matrices Multivariate statistical inference including inferences about both mean vectors and covariance matrices Principal components analysis Canonical correlation analysis Discrimination and classification analysis for two or more populations and spatial smoothing Cluster analysis including similarity and dissimilarity measures and hierarchical and nonhierarchical clustering methods Intuitive and geometric understanding of concepts is emphasized and all examples are relatively simple and include background explanations Computational results and graphs are presented using the freely available R software and can be replicated by using a variety of software packages Throughout the book problem sets and solutions contain partial numerical results allowing readers to confirm the accuracy of their approach and a related website features additional resources including the book s datasets and figures Statistics for
