SOLVED EXERCISES

S1. (a) For Rowena, Up strictly dominates Down, so Down may be eliminated. For Colin, Right strictly dominates Left, so Left may be eliminated. These actions leave the pure-strategy Nash equilibrium (Up, Right).

(b) Down is dominant for Rowena and Left is dominant for Colin. Equilibrium: (Down, Left) with payoffs of (6, 5).

(c) There are no dominated strategies for Rowena. For Colin, Left dominates Middle and Right. Thus, these two strategies may be eliminated, leaving only Left. With only Left remaining, for Rowena, Straight dominates both Up and Down, so they are eliminated, making the pure-strategy Nash equilibrium (Straight, Left).

(d) Beginning with Rowena, Straight dominates Down, so Down is eliminated. Then for Colin, Middle dominates both Right and Left, so both are eliminated, leaving only Middle. Because Straight and Up both give a payoff of 1, neither may be eliminated for Rowena, so there are two pure-strategy Nash equilibria: (Up, Middle) and (Straight, Middle).

S2. (a) Zero-sum game (payoffs in all cells sum to 4).

(b) Non-zero-sum.

(c) Zero-sum or (payoffs in all cells sum to 6).

(d) Zero-sum or (payoffs in all cells sum to 7).

Games, Gambling, and Probability David G. Taylor, 2021-06-22 Many experiments have shown the human brain generally has very serious problems dealing with probability and chance A greater understanding of probability can help develop the intuition necessary to approach risk with the ability to make more informed and better decisions The first four chapters offer the standard content for an introductory probability course albeit presented in a much different way and order The chapters afterward include some discussion of different games different ideas that relate to the law of large numbers and many more mathematical topics not typically seen in such a book The use of games is meant to make the book and course feel like fun Since many of the early games discussed are casino games the study of those games along with an understanding of the material in later chapters should remind you that gambling is a bad idea you should think of placing bets in a casino as paying for entertainment Winning can obviously be a fun reward but should not ever be expected Changes for the Second Edition New chapter on Game Theory New chapter on Sports Mathematics The chapter on Blackjack which was Chapter 4 in the first edition appears later in the book Reorganization has been done to improve the flow of topics and learning New sections on Arkham Horror Uno and Scrabble have been added Even more exercises were added The goal for this textbook is to complement the inquiry based learning movement In my mind concepts and ideas will stick with the reader more when they are motivated in an interesting way Here we use questions about various games not just casino games to motivate the mathematics and I would say that the writing emphasizes a just in time mathematics approach Topics are presented mathematically as questions about the games themselves are posed Table of Contents Preface 1 Mathematics and Probability 2 Roulette and Craps Expected Value 3 Counting Poker Hands 4 More Dice Counting and Combinations and Statistics 5 Game Theory Poker Bluffing and Other Games 6 Probability Stochastic Matrices Board Game Movement 7 Sports Mathematics Probability Meets Athletics 8 Blackjack Previous Methods Revisited 9 A Mix of Other Games 10 Betting Systems Can You Beat the System 11 Potpourri Assorted Adventures in Probability Appendices Tables Answers and Selected Solutions Bibliography Biography Dr David G Taylor is a professor of mathematics and an associate dean for academic affairs at Roanoke College in southwest Virginia He attended Lebanon Valley College for his B S in computer science and mathematics and went to the University of Virginia for his Ph D While his graduate school focus was on studying infinite dimensional Lie algebras he started studying the mathematics of various games in order to have a more undergraduate friendly research

agenda Work done with two Roanoke College students Heather Cook and Jonathan Marino appears in this book Currently he owns over 100 different board games and enjoys using probability in his decision making while playing most of those games In his spare time he enjoys reading cooking coding playing his board games and spending time with his six year old dog Lilly

Intriligator, 1981 V 1 Historical introduction v 2 Mathematical approaches to microeconomic theory v 3 Mathematical approaches to welfare economics *Two-Person Zero-Sum Games* Alan Washburn, 2013-11-29 Two person zero sum game theory deals with situations that are perfectly competitive there are exactly two decision makers for whom there is no possibility of cooperation or compromise It is the most fundamental part of game theory and the part most commonly applied There are diverse applications to military battles sports parlor games economics and politics The theory was born in World War II and has by now matured into a significant and tractable body of knowledge about competitive decision making The advent of modern powerful computers has enabled the solution of many games that were once beyond computational reach *Two Person Zero Sum Games* 4th Ed offers an up to date introduction to the subject especially its computational aspects Any finite game can be solved by the brute force method of enumerating all possible strategies and then applying linear programming The trouble is that many interesting games have far too many strategies to enumerate even with the aid of computers After introducing ideas terminology and the brute force method in the initial chapters the rest of the book is devoted to classes of games that can be solved without enumerating every strategy Numerous examples are given as well as an extensive set of exercises Many of the exercises are keyed to sheets of an included Excel workbook that can be freely downloaded from the SpringerExtras website This new edition can be used as either a reference book or as a textbook **Astounding Science-fiction**, 1958 Publications Mental Health Research Institute, 1956 **Proceedings**
