about computer systems as regards to making accurate predictions for whatever goal doesn't have to be difficult even if you are not ready to enroll for a computer science or IT course. In fact, it's easier than you think. One article published in *Elite Data Science* proves that machine learning can help us lead happier and healthier lives especially with the recent breakthroughs in deep learning that involves imitation of brain neurons. Another one published in *Analytics Training* asserts that learning machine learning is one of the best ways to guarantee success in many areas of the modern world including business. Another article in *Towards Data Science* asserts that employing machine learning in manufacturing is the best way to improve efficiency, save money and time. That means that understanding machine learning that tiny part of Artificial intelligence can impact your daily life and businesses greatly. The question is Where do you even start? How do you build your understanding of machine learning to a point where you can start using it to make your life better? What are the critical things you need to learn about machine learning to get started as a beginner? What areas of your life can you apply your knowledge of machine learning? If you have these and other related questions, this book is for you, so keep reading. Here's just a tiny fraction of what you'll discover in this book: The history of machine learning, What machine learning can do for your business, The machine learning algorithms, How to develop a machine learning model from start to finish, How neural networks work in machine learning, The auto encoders, What you need to know about EM algorithm and how it is applied, Logistic regression for machine learning, The theory and setup in deep learning with tensorflow, Natural language processing, Data cleansing and much much more. Take a second to imagine how you'd feel understanding how to control a computer system to deliver output as you desire without hiring an expert or at least understanding how computers make predictions.
