Modeling and Simulation of Chemical Process Systems Nayef Ghasem, 2018-11-08 In this textbook the author teaches readers how to model and simulate a unit process operation through developing mathematical model equations solving model equations manually and comparing results with those simulated through software It covers both lumped parameter systems and distributed parameter systems as well as using MATLAB and Simulink to solve the system model equations for both Simplified partial differential equations are solved using COMSOL an effective tool to solve PDE using the fine element method This book includes end of chapter problems and worked examples and summarizes reader goals at the beginning of each chapter *Adsorptive Separation Process for Water and Gaseous Air Pollution Control* Tushar Kanti Sen, 2026-01-22 Adsorption is one of the efficient cost effective separation processes that is in use for the removal of water and gaseous pollutants This book provides a balanced mix of fundamental adsorption theory and application with a compilation of up to date developments and trends It presents fundamental and advanced knowledge on solid liquid and gas solid separation unit operations and critically discusses the reaction based mechanism of adsorption and adsorptive parameters estimation Key Features Puts emphasis on adsorption for water and gas remediation reviewing state of the art of the technology as well as introducing beginners to adsorption Explores factors affecting the adsorption separation process including types of adsorbents and composite nano adsorbents Includes batch and continuous unit operation and design calculations Proposes development of a sustainable cost effective water filter including arsenic rich water purification Discusses utilization of industrial and agricultural solid waste in alternative adsorbents during solid liquid and gas solid separation This book is useful for researchers and graduate students in chemical and environmental engineering and analytical chemistry Mass Transfer Marek Solecki, 2015-10-22 This book covers a wide variety of topics related to advancements in different stages of mass transfer modelling processes Its purpose is to create a platform for the exchange of recent observations experiences and achievements It is recommended for those in the chemical biotechnological pharmaceutical and nanotechnology industries as well as for students of natural sciences technical environmental and employees in companies which manufacture machines for the above mentioned industries This work can also be a useful source for researchers and engineers dealing with mass transfer and related issues *Separations Chemistry* Fedor Macášek, James D. Navratil, 2016-06-06 Separation of chemical species is a gate to final success of synthesis and preparation of compounds in pure and defined state Variability of natural and artificial mixtures to be treated is enormous Task of chemistry is to separate components of homogeneous mixtures the gaseous and liquid solutions The book concentrates on understanding the basic philosophies of both equilibrium and nonequilibrium chemical thermodynamics and engineering performance that lay in principle of separation technique such as distillation crystallization centrifugation sorption membrane separations chromatography and liquid liquid extraction Specific phenomena connected with photochemical

separation isotope composition and radioactivity are discussed as well The book is written for advanced students of chemistry having the knowledge of physical chemistry Calculation examples are based on the international system of units Unique list of over 1 300 full references covers scientific literature of the eighteenth to the twenty first centuries **Handbook of Membrane Separations** Anil K. Pabby,S. Ranil Wickramasinghe,Ana-Maria Sastre,2023-12-22 The third edition of the Handbook of Membrane Separations Chemical Pharmaceutical Food and Biotechnological Applications provides a comprehensive discussion of membrane applications Fully updated to include the latest advancements in membrane science and technology it is a one of its kind overview of the existing literature This fully illustrated handbook is written by experts and professionals in membrane applications from around the world Key Features Includes entirely new chapters on organic solvent resistant nanofiltration membrane condensers membrane reactors in hydrogen production membrane materials for haemodialysis and integrated membrane distillation Covers the full spectrum of membrane technology and its advancements Explores membrane applications in a range of fields from biotechnological and food processing to industrial waste management and environmental engineering This book will appeal to both newcomers to membrane science as well as engineers and scientists looking to expand their knowledge on upcoming advancements in the field Advanced Physicochemical Treatment Processes Lawrence K. Wang,Yung-Tse Hung,Nazih K. Shammam,2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken *Chitosan Based Materials and its Applications* Sergio Paulo Campana-Filho,Luiz Antonio de Almeida Pinto,2017-06-07 This volume presents 10 reviews contributed by eminent researchers around the world on chitosan based materials The introductory chapters present information on general characteristics of chitosan and various types of materials which are based on it such as nanofibers nanoparticles nanocapsules and other chemically modified chitosans This is followed by an explanation of chitosan characterization and

extraction techniques Concluding chapters describe the applications of chitosan products in water treatment drug delivery edible films and pervaporation membranes Readers will therefore gain an understanding about chitosan and materials derived from this polymer and their practical applications The volume serves as a simple reference for chemical engineering students and professionals interested in the basic and applied chemistry of chitosan and chitosan derived products

Free-Radical Retrograde-Precipitation Polymerization (FRRPP) Gerard Caneba,2010-01-08 Providing insight on the free radical retrograde precipitation polymerization process this volume examines the phenomenological aspects in comparison to other materials such as nanoscale confinement behavior and nucleated hot spots **Separation Process**
