Plastic Injection Molding For Firearm Manufacturing:

Designing Small Weapons Jose Herrera-Ramirez, Luis Zuñiga-Aviles, 2022-06-09 This book focuses on developing small weapons following the lifecycle of a firearm from design to manufacture. It demonstrates how modern technologies can be used at every stage of the process such as design methodologies CAD CAE CAM software rapid prototyping test benches materials heat and surface treatments and manufacturing processes. Several case studies are presented to provide detailed considerations on developing specific topics. Small weapons are designed to be carried by one person; examples are pistols, revolvers, rifles, carbines, shotguns, and submachine guns. Beginning with a review of the history of weapons from ancient to modern times, this book builds on this by mapping out recent innovations and state-of-the-art technologies that have advanced small weapon design. Presenting a comprehensive guide to computer design tools used by weapon engineers, this book demonstrates the capabilities of modern software at all stages of the process, looking at the computer-aided design, engineering, and manufacturing. It also details the materials used to create small weapons, notably steels, engineering polymers, composites, and emerging materials. Manufacturing processes, both conventional and unconventional, are discussed, for example, casting, powder metallurgy, additive manufacturing, and heat and surface treatments. This book is essential reading to those in the field of weapons, such as designers, workers in research and development, engineering, and design students, students at military colleges, sportsmen, hunters, and those interested in firearms. Dr. Jose Martin Herrera Ramirez is a military engineer with experience in the field of weapon and ammunition development. After receiving his PhD in Materials Science and Engineering from the Paris School of Mines in France, he was the head of the Applied Research Center and Technology Development for the Mexican Military Industry CIADTIM. He now researches the development of metallic alloys and composites at the Research Center for Advanced Materials CIMAV in Chihuahua, Mexico. Dr. Luis Adrian Zuñiga Aviles is a military engineer with wide experience in the field of weapon and ammunition development. He was head of the prototypes and simulation departments at the Applied Research Center and Technology Development for the Mexican Military Industry CIADTIM and head of engineering of the Production Directorate. He received his PhD in Science and Technology on Mechatronics from the Center for Engineering and Industrial Development CIDESI in Queretaro, Mexico. He now researches the new product design and development for military application, machinery, robotics, and medical devices in the Faculty of Medicine at the Autonomous University of Mexico State UAEMex and the Faculty of Engineering at UAEMex as part of the Researchers for Mexico program CONACYT.

The Clandestine Building of Libya's Chemical Weapons Factory Thomas C. Wiegale,1992 From 1980 to 1989 Libya acquired the necessary ingredients to construct an elaborate chemical weapons production facility Although the United States and other nations opposed this acquisition Libya s Middle Eastern neighbors supported it Yet the primary physical assistance came from West German firms that willingly allowed their products to be assembled into a facility to produce chemical weapons This riveting account by Thomas C Wiegale whose incisive research was supported by a grant from the United States Institute of Peace documents Libya s successful clandestine effort The United States was reluctant to provide detailed public information regarding Libya s quest and Libya refused to reveal any definitive information insisting that it was not building the facility In the end it was West Germany and its commercial firms that after initially withholding information released official documentation regarding their involvement with Libya Wiegale analyzes the elaborate scheme used to funnel chemical processing equipment from western

Europe to Libya drawing on press revelations and a lengthy report issued by the Kohl government This report proved to be a key document as it revealed German knowledge of Libyan chemical weapons activities through information generated by Bonn s own intelligence and diplomatic agencies According to Wiegele one of the problems in controlling the development and proliferation of chemical weapons is the ready availability of the substances used to create the weapons Since many of these substances are used to produce nonmilitary commodities such as pharmaceutical fertilizer petrochemical and pesticide products they can be easily bought through common commercial channels Wiegele wisely treats the Libyan case as a critical international situation and not as a crisis He views Libya s quest as a serious and prolonged action that has had no immediate effect on power distribution in the international community and has not yet posed a direct challenge to the security of any individual nation Nevertheless he stresses Libya s potentially destabilizing effect in the Middle East and elsewhere He is likewise aware that important connections both operational and theoretical may exist between Libya s attempt to build a chemical weapons factory and the events in Iraq that resulted in the war in the Middle East in January 1991 Turning to a broader arena Wiegele explores the concept of deception and lying in international affairs He believes that it is critical for students of international relations to develop a more comprehensive literature about and an understanding of the concept of deception because deception seems likely to play an increasingly important role in the high technology orientation of present day international relations
