**A Course on Statistics for Finance** Stanley L. Sclove, 2012-12-06 Taking a data driven approach *A Course on Statistics for Finance* presents statistical methods for financial investment analysis The author introduces regression analysis time series analysis and multivariate analysis step by step using models and methods from finance The book begins with a review of basic statistics including descriptive statistics kinds of variables and types of data sets It then discusses regression analysis in general terms and in terms of financial investment models such as the capital asset pricing model and the Fama French model It also describes mean variance portfolio analysis and concludes with a focus on time series analysis Providing the connection between elementary statistics courses and quantitative finance courses this text helps both existing and future quants improve their data analysis skills and better understand the modeling process

*Introduction to Probability with Mathematica* Kevin J. Hastings, 2009-09-21 Updated to conform to Mathematica 7.0 *Introduction to Probability with Mathematica* Second Edition continues to show students how to easily create simulations from templates and solve problems using Mathematica It provides a real understanding of probabilistic modeling and the analysis of data and encourages the application of these ideas to practical problems The accompanying downloadable resources offer instructors the option of creating class notes demonstrations and projects New to the Second Edition Expanded section on Markov chains that includes a study of absorbing chains New sections on order statistics transformations of multivariate normal random variables and Brownian motion More example data of the normal distribution More attention on conditional expectation which has become significant

**Calculating Success** Carl Hoffmann, Eric L. Lesser, Tim Ringo, 2012 This title helps us in using analytics to make more effective talent management decisions Most managers understand that employees can make or break a company's strategy You can have the best ideas and the most promising plan but if you don't have the right people to carry it out that plan will fail Still despite having this critical knowledge most companies don't have a data driven approach to the decisions they make about talent In fact a recent IBM study that interviewed over 400 senior HR executives showed that only 6 per cent of companies believe they can effectively use human capital data to make strategic workforce decisions Enter **Calculating Success** the forthcoming book by human capital experts Carl Hoffmann Eric Lesser and Tim Ringo Based on decades of experience creating human capital systems at IBM the authors show how using analytics can dramatically improve a company's ability to make better and faster talent decisions By organizing the book around four crucial questions managers must ask the book provides a framework to help executives rethink how they use information on talent The result A path to using analytics to make more effective talent management decisions In addition the authors' ideas help to link HR with all levels of the organization in a strategic way by showing readers how to connect their version of analytics to the strategic mission of the larger organization so that the analytics flows throughout the enterprise With detailed examples and studies from IBM's Institute for Business Value and Human Capital Management practice this book will make you rethink the relationship of talent to business success The results allow for a more stable and cost effective workforce an improved ability to motivate employees and a more systematic approach to developing critical talent
