distinguish between classes High AUC values indicated excellent model performance Furthermore we constructed true values versus predicted values diagrams to provide insights into how well our models aligned with the actual data distribution Learning curves were also generated to observe a model s performance as a function of training data size helping us assess whether the model was overfitting or underfitting Lastly we presented the results in a clear and organized manner saving them to Excel files for easy reference This allowed us to compare the performance of different models and make an informed choice about which one to select for our specific task In summary this project was a comprehensive exploration of the machine learning model development and evaluation process We prepared the data selected and fine tuned various models assessed their performance using multiple metrics and visualizations and ultimately arrived at a well informed decision about the most suitable model for our dataset This approach serves as a valuable blueprint for tackling real world machine learning challenges effectively
