Case Studies in Optimal Design and Maintenance Planning of Civil Infrastructure Systems Dan M. Frangopol, 1999-01-01 Sponsored by the Structural Engineering Institute of ASCE This collection contains 19 papers on the optimal design and maintenance planning of civil infrastructure systems such as bridges buildings transmission line structures and nuclear power plants The authors coming from Austria Canada Denmark England Germany Israel Japan Malaysia Mexico Switzerland and the United States offer case studies that are detailed and research findings that describe applications of life cycle reliability and optimization theories to civil infrastructure systems Topics include prioritization of bridge maintenance needs life cycle optimization of structures cost effectiveness optimization for aseismic design criteria of buildings condition assessment and maintenance of aging structures in critical facilities condition assessment of bridges optimization of quality assurance of welded structures optimal reliability based bridge maintenance planning effective reanalysis for damaged structures optimal design of transmission line structures optimization and reliability lifetime oriented design and optimum policy for civil infrastructure improvement decision making This book serves as a valuable reference to engineers and managers concerned with design and maintenance planning of civil infrastructure systems

Optimal Design and Control Jeff Borggaard, John Burkhardt, Max Gunzburger, Janet Peterson, 2012-12-06 This volume is the proceedings of the Workshop on Optimal Design and Control that

was held in Blacksburg Virginia April 8 9 1994 The workshop was sponsored by the Air Force Office of Scientific Research through the Air Force Center for Optimal Design and Control CODAC at Virginia Tech The workshop was a gathering of engineers and mathematicians actively involved in innovative research in control and optimization with emphasis placed on problems governed by partial differential equations The interdisciplinary nature of the workshop and the wide range of subdisciplines represented by the participants enabled an exchange of valuable information and also led to significant discussions about multidisciplinary optimization issues One of the goals of the workshop was to include laboratory industrial and academic researchers so that analyses algorithms implementations and applications could all be well represented in the talks this interdisciplinary nature is reflected in these proceedings An overriding impression that can be gleaned from the papers in this volume is the complexity of problems addressed by not only those authors engaged in applications but also by those engaged in algorithmic development and even mathematical analyses Thus in many instances systematic approaches using fully nonlinear constraint equations are routinely used to solve control and optimization problems in some cases replacing ad hoc or empirically based procedures

Frontier Technologies for Infrastructures Engineering Alfredo H.S.
