

# Rudiments of radar

- Fundamentally, the radar consists of transmitter and a receiver
- It works by generating EM waves that is radiated into space by an antenna. A portion of the EM waves is intercepted by the TARGET and re-radiated. The re-radiated waves is collected by the radar receiver antenna and passed on to a receiver where it is processed and displayed.

Advances in

Heuristic Signal Processing and Applications Amitava Chatterjee, Hadi Nobahari, Patrick Siarry, 2013-06-05 There have been

significant developments in the design and application of algorithms for both one dimensional signal processing and multidimensional signal processing namely image and video processing with the recent focus changing from a step by step procedure of designing the algorithm first and following up with in depth analysis and performance improvement to instead applying heuristic based methods to solve signal processing problems In this book the contributing authors demonstrate both general purpose algorithms and those aimed at solving specialized application problems with a special emphasis on heuristic iterative optimization methods employing modern evolutionary and swarm intelligence based techniques The applications considered are in domains such as communications engineering estimation and tracking digital filter design wireless sensor networks bioelectric signal classification image denoising and image feature tracking The book presents interesting state of the art methodologies for solving real world problems and it is a suitable reference for researchers and engineers in the areas of heuristics and signal processing Synthetic Aperture Radar Systems Robert O.
