Synchronization Algorithms And Concurrent Programming:

Synchronization Algorithms and Concurrent Programming Gadi Taubenfeld, 2006 The first textbook that focuses purely on Synchronization a fundamental challenge in Computer Science that is fast becoming a major performance and design issue for concurrent programming on modern architectures and for the design of distributed systems

Nonsequential and Distributed Programming with Go Christian Maurer, 2021-01-19 Der Band bietet eine kompakte Einführung in die Nichtsequentielle Programmierung als gemeinsamen Kern von Vorlesungen über Betriebssysteme Verteilte Systeme Parallele Algorithmen Echtzeitprogrammierung und Datenbanktransaktionen Basiskonzepte zur Synchronisation und Kommunikation nebenläufiger Prozesse werden systematisch dargestellt Schlüssel Semaphore Monitore lokaler und netzweiter Botschaftenaustausch Die Algorithmen sind in der Programmiersprache Google Go formuliert mit der vielen Synchronisationskonzepte ausgedrückt werden können *Encyclopedia of Algorithms* Ming-Yang Kao, 2008-08-06 One of Springer's renowned Major Reference Works this awesome achievement provides a comprehensive set of solutions to important algorithmic problems for students and researchers interested in quickly locating useful information This first edition of the reference focuses on high impact solutions from the most recent decade while later editions will widen the scope of the work All entries have been written by experts while links to Internet sites that outline their research work are provided The entries have all been peer reviewed This defining reference is published both in print and online

Nonsequential and Distributed Programming with Go Christian Maurer, 2025-08-02 After a short chapter on basic aspects of software engineering and its realization in Go this book introduces to nonsequential and distributed programming with Go It systematically presents basic concepts for the synchronization and communication of concurrent processes These include locks semaphores fairness and deadlocks monitors local and network wide message passing networks as graphs network exploration distributed depth and breadth first search and the selection of a leader in networks In order to make readers familiar with the concepts the author always takes up the same classic examples This makes learning easier because the concepts presented can be compared more easily with the language resources The algorithms are formulated in the Go programming language which can be used to express numerous synchronization concepts Due to its simple syntax Go also offers the advantage that readers without prior knowledge can follow the basic concepts The chapters on locks semaphores monitors and network wide message passing also present some basic approaches to programming in C and Java All source texts are available online Besides a number of error corrections and smaller updates in this second edition the nanouniverse nU is replaced with the microuniverse U This allows for beautiful animations in many places which are not possible with the nanouniverse due to a lack of the necessary support for inputs and outputs e.g. in the chapters on fairness messages farMonitors traversals and election **CONCUR 2012- Concurrency Theory** Maciej Koutny, Irek Ulidowski, 2012-09-02

This book constitutes the thoroughly refereed proceedings of the 23rd International Conference on Concurrency Theory

CONCUR 2012 held in Newcastle upon Tyne UK September 4 7 2012 The 35 revised full papers presented together with 4 invited talks were carefully reviewed and selected from 97 submissions The papers are organized in topics such as reachability analysis qualitative and timed systems behavioural equivalences temporal logics session types abstraction mobility and space in process algebras stochastic systems probabilistic systems Petri nets and non sequential semantics verification decidability

Distributed Computing Yehuda Afek,2013-10-04 This book constitutes the proceedings of the 27th International Symposium on Distributed Computing DISC 2013 held in Jerusalem Israel in October 2013 The 27 full papers presented in this volume were carefully reviewed and selected from 142 submissions 16 brief announcements are also included The papers are organized in topical sections named graph distributed algorithms topology leader election and spanning trees software transactional memory shared memory executions shared memory and storage gossip and rumor shared memory tasks and data structures routing radio networks and the SINR model crypto trust and influence and networking

Concurrent Programming: Algorithms, Principles, and Foundations Michel Raynal,2012-12-30 This book is devoted to the most difficult part of concurrent programming namely synchronization concepts techniques and principles when the cooperating entities are asynchronous communicate through a shared memory and may experience failures Synchronization is no longer a set of tricks but due to research results in recent decades it relies today on sane scientific foundations as explained in this book In this book the author explains synchronization and the implementation of concurrent objects presenting in a uniform and comprehensive way the major theoretical and practical results of the past 30 years Among the key features of the book are a new look at lock based synchronization mutual exclusion semaphores monitors path expressions an introduction to the atomicity consistency criterion and its properties and a specific chapter on transactional memory an introduction to mutex freedom and associated progress conditions such as obstruction freedom and wait freedom a presentation of Lamport s hierarchy of safe regular and atomic registers and associated wait free constructions a description of numerous wait free constructions of concurrent objects queues stacks weak counters snapshot objects renaming objects etc a presentation of the computability power of concurrent objects including the notions of universal construction consensus number and the associated Herlihy s hierarchy and a survey of failure detector based constructions of consensus objects The book is suitable for advanced undergraduate students and graduate students in computer science or computer engineering graduate students in mathematics interested in the foundations of process synchronization and practitioners and engineers who need to produce correct concurrent software The reader should have a basic knowledge of algorithms and operating systems

Formal Methods for Industrial Critical Systems Stefan Kowalewski,Marco Roveri,2010-09-09 This book constitutes the proceedings of the 15th International Workshop on Formal Methods for Industrial Critical Systems FMICS 2010 held in Antwerp Belgium in September 2010 co located with ASE 2010 the 25th IEEE ACM International Conference on Automated Software Engineering The 14 papers presented were carefully reviewed and

selected from 33 submissions The aim of the FMICS workshop series is to provide a forum for researchers who are interested in the development and application of formal methods in industry It also strives to promote research and development for the improvement of formal methods and tools for industrial applications

Networked Systems Parosh Aziz Abdulla, Carole Delporte-Gallet, 2016-09-14 This book constitutes the refereed post proceedings of the 4th International Conference on Networked Systems NETYS 2016 held in Marrakech Morocco in May 2016 The 22 full papers and 11 short papers presented together with 19 poster abstracts were carefully reviewed and selected from 121 submissions They report on best practices and novel algorithms results and techniques on networked systems and cover topics such as multi core architectures concurrent and distributed algorithms parallel concurrent distributed programming distributed databases cloud systems networks security and formal verification

Advances and Innovations in Systems, Computing Sciences and Software Engineering Khaled Elleithy, 2007-08-28 Advances and Innovations in Systems Computing Sciences and Software Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computing Sciences Software Engineering and Systems Advances and Innovations in Systems Computing Sciences and Software Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2006 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2006 All aspects of the conference were managed on line not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session
