Water Infrastructure for Sustainable Communities Xiaodi Hao, Vladimir Novotny, Valerie Nelson, 2010-07-31 A new model for water management is emerging worldwide in response to water shortages polluted waterways climate change and loss of biodiversity Cities and towns are questioning the ecological and financial sustainability of big pipe water stormwater and sewer systems and are searching for lighter footprint more sustainable solutions Pilot projects are being built that use treat store and reuse water locally and that build distributed designs into restorative hydrology This book has been developed from the conference on Sustainable Water Infrastructure for Villages and Cities of the Future SWIF2009 held in November 2009 in Beijing China that brought together an international gathering of experts in urban water and drainage infrastructure landscape architecture economics environmental law citizen participation utility management green building and science and technology development Water Infrastructure for Sustainable Communities China and the World reveals how imaginative concepts are being developed and implemented to ensure that cities towns and

villages and their water resources can become ecologically sustainable and provide clean water. With both urban and rural waters as a focal point, the links between water quality and hydrology, landscape and the broader concepts of green cities, villages and smart development are explored. The book focuses on decentralized concepts of potable water, stormwater and wastewater management that would provide clean water. It results in water management systems that would be resilient to extreme events such as excessive flows due to extreme meteorological events, severe droughts and deteriorated water and urban ecosystem quality. A particular emphasis is placed on learning lessons from the many innovative projects being designed in China and other initiatives around the world. The principal audience for the book is university faculty and students, scientists in research institutes, water professionals, governmental organizations, NGOs, urban landscape architects and planners. Arup's Tall Buildings in Asia Goman Wai-Ming Ho, 2017-10-12. Through a series of detailed case studies from East Asia, Arup, one of the global leaders in tall building design, presents the latest developments in the field to inspire more innovative and sustainable ideas in tall building design and engineering. This book exhibits the key design aspects of tall buildings in 20 case studies from China, Singapore, Hong Kong, Vietnam and Japan. Chapters cover design and construction, safety concerns, sustainability strategies, BIM and optimisation solutions, and include contributions from the actual project engineers. The projects chosen are not the tallest buildings, but all of them have been selected for their significant engineering insights and values. Arup's engineers explain the design principles and how they overcame various design constraints and challenges while exceeding their clients' expectations. Unique examples include the design and application of a hybrid outrigger system in the Raffles City Chongqing project, the challenges encountered in the construction of the CCTV Headquarters, Beijing, as well as Tianjin's Goldin Finance 117 Tower, Ho Chi Minh City's Vincom Landmark 81, the China Resources Headquarters, Ping An IFC, Tokyo's Nicolas G. Hayek Center and the Shanghai World Financial Centre. These varied and complex case studies draw on multi-disciplinary design and engineering challenges which make this book essential reading for architects, structural engineers, project managers and researchers of high-rise buildings. The book also provides a useful reference and link between practitioners in the industry, academia and engineering students.
