

Rudiments of radar

- Fundamentally, the radar consists of transmitter and a receiver
- It works by generating EM waves that is radiated into space by an antenna. A portion of the EM waves is intercepted by the TARGET and re-radiated. The re-radiated waves is collected by the radar receiver antenna and passed on to a receiver where it is processed and displayed.

R. Burrows,2013-10-22 Radio Wave Propagation Consolidated Summary Technical Report of the Committee on Propagation of the National Defense Research Committee presents all the scientific information and report of experiments This book discusses the problems encountered in the propagation of radio waves Organized into three volumes this book begins with an overview of the technical developments in the study of tropospheric propagation This text then outlines the general theory of standard and nonstandard propagation together with descriptions and results of transmission experiments designed to test the theory Other chapters consider the more unusual problems concerning the radar behavior of targets This book discusses as well the problems of radio wave propagation in the standard atmosphere at frequencies above 30 megacycles The final chapter deals with the selection and utilization of local terrain features that affect propagation and the performance of equipment This book is a valuable resource for scientists and engineers in the field of radio wave propagation *Choice* ,1970 Sensors, Systems, and Next-generation Satellites ,2001 Ubiquitous Positioning and Mobile Location-Based Services in Smart Phones Chen, Ruizhi,2012-06-30 Many smart phone users reap the benefits of location based services While tracking users positions using their smart phone is an issue of concern for some others who use Foursquare or rely on their Android GPS view location based services as a necessity Ubiquitous Positioning and Mobile Location Based Services in Smart Phones explores new research in smart phones with an emphasis on positioning solutions in smart phones smart phone based navigation applications mobile geographical information systems and related standards *Robotic Sailing* Alexander Schlaefer,Ole Blaurock,2011-07-15 While sailing has a long tradition both as a means of transportation and as a sport robotic sailing is a fairly new area of research One of its unique characteristics is the use of wind for propulsion On the one hand this allows for long range and long term autonomy On the other hand the dependency on changing winds presents a serious challenge for short and long term planning collision avoidance and boat control Moreover building a robust and seaworthy sailing robot is no simple task leading to a truly interdisciplinary engineering problem These proceedings summarize the state of the art as presented at the International Robotic Sailing Conference 2011 Following an overview of the history of autonomous sailing a number of recent boat designs is presented ranging from small one design boats to vessels built to cross the Atlantic Ocean Subsequently various aspects of system design and validation are discussed further highlighting the interdisciplinary nature of the field Finally methods for collision avoidance localization and route planning are covered Introduction to Radar Systems Merrill Ivan Skolnik,1962 Since the publication of the second edition of Introduction to Radar Systems there has been continual development of new radar capabilities and continual improvements to the technology and practice of radar This growth has necessitated the addition and updating of the following topics for the third edition digital technology automatic detection and tracking doppler technology airborne radar and target recognition The
