Algorithms Sanjoy Dasgupta,2008 *Nature-Inspired Intelligent Techniques for Solving Biomedical Engineering Problems* Kose, Utku,Guraksin, Gur Emre,Deperlioglu, Omer,2018-03-31 Technological tools and computational techniques have enhanced the healthcare industry These advancements have led to significant progress and novel opportunities for biomedical engineering Nature Inspired Intelligent Techniques for Solving Biomedical Engineering Problems is a pivotal reference source for emerging scholarly research on trends and techniques in the utilization of nature inspired approaches in biomedical engineering Featuring extensive coverage on relevant areas such as artificial intelligence clinical decision support systems and swarm intelligence this publication is an ideal resource for medical practitioners professionals students engineers and researchers interested in the latest developments in biomedical technologies *Evolutionary Algorithms for Solving Multi-Objective Problems* Carlos Coello Coello,Gary B. Lamont,David A. van Veldhuizen,2007-08-26 Solving multi objective problems is an evolving effort and computer science and other related disciplines have given rise to many powerful deterministic and stochastic techniques for addressing these large dimensional optimization problems Evolutionary algorithms are one such generic stochastic approach that has proven to be successful and widely applicable in solving both single objective and multi objective problems This textbook is a second edition of Evolutionary Algorithms for Solving Multi Objective Problems significantly expanded and adapted for the classroom The various features of multi objective evolutionary algorithms are presented here in an innovative and student friendly fashion incorporating state of the art research The book disseminates the application of evolutionary algorithm techniques to a variety of practical problems including test suites with associated performance based on a variety of appropriate metrics as well as serial and parallel algorithm implementations

Evolutionary Algorithms for Solving Multi-Objective Problems Carlos A. Coello Coello,David A. Van Veldhuizen,Gary B. Lamont,2002 The solving of multi objective problems MOPs has been a continuing effort by humans in many diverse areas including computer science engineering economics finance industry physics chemistry and ecology among others Many powerful and deterministic and stochastic techniques for solving these large dimensional optimization problems have risen out of operations research decision science engineering computer science and other related disciplines The explosion in computing power continues to arouse extraordinary interest in stochastic search algorithms that require high computational speed and very large memories A generic stochastic approach is that of evolutionary algorithms EA Such algorithms have been demonstrated to be very powerful and generally applicable for solving different single objective problems Their fundamental algorithmic structures can also be applied to solving many multi objective problems In this book the various features of multi objective evolutionary algorithms MOEAs are presented in an innovative and unique fashion with detailed customized forms suggested for a variety of applications Also extensive MOEA discussion questions and possible research directions are presented at the end of each chapter For additional information and supplementary teaching materials please

Variants of Evolutionary Algorithms for Real-World Applications Raymond Chiong, Thomas Weise, Zbigniew Michalewicz, 2011-11-13 Evolutionary Algorithms EAs are population based stochastic search algorithms that mimic natural evolution Due to their ability to find excellent solutions for conventionally hard and dynamic problems within acceptable time EAs have attracted interest from many researchers and practitioners in recent years This book Variants of Evolutionary Algorithms for Real World Applications aims to promote the practitioner s view on EAs by providing a comprehensive discussion of how EAs can be adapted to the requirements of various applications in the real world domains It comprises 14 chapters including an introductory chapter re-visiting the fundamental question of what an EA is and other chapters addressing a range of real world problems such as production process planning inventory system and supply chain network optimisation task based jobs assignment planning for CNC based work piece construction mechanical ship design tasks that involve runtime intense simulations data mining for the prediction of soil properties automated tissue classification for MRI images and database query optimisation among others These chapters demonstrate how different types of problems can be successfully solved using variants of EAs and how the solution approaches are constructed in a way that can be understood and reproduced with little prior knowledge on optimisation
