

WEEK 1 26/07/2018

- An Immunogen (immunogenic) elicits an adaptive immune response e.g. influenza virus
- An Antigen (Ag) is a specific immune target (usually referring to recognition by adaptive cells) e.g. hemagglutinin on surface of influenza virus.
- Levels of protection from pathogens:
 - First line: Physical barriers that viruses and bacteria must cross. Skin covers and mucous membranes that line digestive, respiratory, reproductive tracts, cover ~400 m²
 - Second line: Innate immune system. Macrophages (Greek for "big eater"), neutrophils, natural killer (NK) cells, Cytokines (hormone-like proteins that mediate inflammation), Complement proteins
 - Third line (vertebrates only): Adaptive immune system, adapts to defend against specific pathogens using variable receptors.
 - B cells make antibodies, each individual B cell makes a specific antibody to a specific antigen
 - T cells mediate cellular responses using variable receptors (T cell receptors; TCRs)

- Innate Immunity:
 - Present at birth and for life
 - No specificity (i.e. can respond to many stimuli)
 - Not modified by stimulus (i.e. no memory, not enhanced on subsequent exposure)

Lecture Notes Infectious Diseases:

Lecture Notes on Infectious Diseases Bibhat K. Mandal,1996 The fifth edition of this popular text has been completely rewritten to accommodate the rapid advances in the management of infectious disease over the past decade It provides a core text on the most important infections and uses a systematic approach for each infection with consistently applied headings making information retrieval very easy One new feature is the inclusion of case studies for the most common infections This new edition will be welcomed by medical students and junior doctors in hospital general practice and community medicine Lecture Notes on the Infectious Diseases Bibhat K. Mandal,Richard T. Mayon-White,1984-01

Lecture Notes on the Infectious Diseases John Fairbairn Warin,Alastair G. Ironside,Bibhat K. Mandal,1980

Lecture Notes: Infectious Diseases BK Mandal,E. G. L. Wilkins,EM Dunbar,Richard Mayon-White,2004-02-13 This core text provides an excellent concise introduction to infectious diseases The book integrates basic science with clinical practice with disease orientated descriptions and clinical presentations on a system by system basis It is therefore ideal for both the student and the practitioner For this new sixth edition the text has been brought fully up to date throughout The highly structured and improved text is designed to facilitate easy access to information making the book an ideal resource for clinical attachments and revision There is a new chapter that covers infections in special groups as well as coverage of sepsis and septic shock The Introductory chapter also takes into account new control measures emerging infections and infections linked with bioterrorism Information on global occurrence is added to the epidemiology sections where relevant and web site information has been included to provide up to date resources on fast moving topics such as AIDS and travel related infections such as SARS The result is a text that is a compact yet comprehensive guide to infectious diseases It will appeal to medical students junior doctors general practitioners and allied health professionals who want a concise introduction to the subject or an ideal revision companion **Lecture Notes on Infectious Diseases** ,2004 With a major update on immunology and immunisation and infections linked with immunosuppression these lecture notes now include detailed information on the new National Strategy on Infectious Diseases

Population Biology of Infectious Diseases R.M. Anderson,R.M. May,2012-12-06 for the design of control programs in extreme cases as discussed below by Fine et al this volume and elsewhere it can happen that immunization programs although they protect vaccinated individuals actually increase the overall incidence of a particular disease The possibility that many nonhuman animal populations may be regulated by parasitic infections is another topic where it may be argued that conventional disciplinary boundaries have retarded investigation While much ecological research has been devoted to exploring the extent to which competition or predator prey interactions may regulate natural populations or set their patterns of geographical distribution few substantial studies have considered the possibility that infectious diseases may serve as regulatory agents 18 On the other hand the many careful epidemiological studies of the transmission and maintenance of parasitic infections in human and other animal populations usually assume the host population density to be

set by other considerations and not dynamically engaged with the disease see for example 1 2 With all these considerations in mind the Dahlem Workshop from which this book derives aimed to weave strands together testing theoretical analysis against empirical facts and patterns and identifying outstanding problems in pursuit of a better understanding of the overall population biology of parasitic infections For the purpose of the workshop the term parasite was defined widely to include viruses bacteria protozoans fungi and helminths
