Wireless Communication and Network - Proceedings of 2015 International Workshop (iwwcn2015) Akira Namatame, 2015-11-30 This book is a collection of all papers presented at the 2015 International Workshop on Wireless Communication and Network IWWCN 2015 which was held on August 21 23 2015 in Kunming Yunnan China The book provides cutting edge development and significant contributions to all major fields of wireless communication and network The book will benefit global researchers and practitioners in the field Data Analytics Shuai Huang, Houtao Deng, 2021-04-15 Data Analytics A Small Data Approach is suitable for an introductory data analytics course to help students understand some main statistical learning models It has many small datasets to guide students to work out pencil solutions of the models and then compare with results obtained from established R packages Also as data science practice is a process that should be told as a story in this book there are many course materials about exploratory data analysis residual analysis and flowcharts to develop and validate models and data pipelines The main models covered in this book include linear regression logistic regression tree models and random forests ensemble learning sparse learning principal component analysis kernel methods including the support vector machine and kernel regression and deep learning Each chapter introduces two or three techniques For each technique the book highlights the intuition and rationale first then shows how mathematics is used to articulate the intuition and formulate the learning problem R is used to implement the techniques on both simulated and real world dataset Python code is also available at the book's website <http://dataanalyticsbook.info>

Agricultural Internet of Things and Decision Support for Precision Smart Farming Annamaria Castrignano, Gabriele Buttafuoco, Raj Khosla, Abdul Mouazen, Dimitrios Moshou, Olivier Naud, 2020-01-09 Agricultural Internet of Things and Decision Support for Smart Farming reveals how a set of key enabling technologies KET related to agronomic management remote and proximal sensing data mining decision making and automation can be efficiently integrated in one system Chapters cover how KETs enable real time monitoring of soil conditions determine real time site specific requirements of crop systems help develop a decision support system DSS aimed at maximizing the efficient use of resources and provide planning for agronomic inputs differentiated in time and space This book is ideal for researchers academics post graduate students and practitioners who want to embrace new agricultural technologies Presents the science behind smart technologies for agricultural management Reveals the power of data science and how to extract meaningful insights from big data on what is most suitable based on individual time and space Proves how advanced technologies used in agriculture practices can become site specific locally adaptive operationally feasible and economically affordable Large-Scale and Distributed Optimization Pontus Giselsson, Anders Rantzer, 2018-11-11 This book presents tools and methods for large scale and distributed optimization Since many methods in Big Data fields rely on solving large scale optimization problems often in distributed fashion this topic has over the last decade emerged to become very important As well as specific coverage of this

active research field the book serves as a powerful source of information for practitioners as well as theoreticians Large Scale and Distributed Optimization is a unique combination of contributions from leading experts in the field who were speakers at the LCCC Focus Period on Large Scale and Distributed Optimization held in Lund 14th 16th June 2017 A source of information and innovative ideas for current and future research this book will appeal to researchers academics and students who are interested in large scale optimization

Encyclopedia of Mathematical Geosciences B. S. Daya Sagar, Qiuming Cheng, Jennifer McKinley, Frits Agterberg, 2023-07-13 The Encyclopedia of Mathematical Geosciences is a complete and authoritative reference work It provides concise explanation on each term that is related to Mathematical Geosciences Over 300 international scientists each expert in their specialties have written around 350 separate articles on different topics of mathematical geosciences including contributions on Artificial Intelligence Big Data Compositional Data Analysis Geomathematics Geostatistics Geographical Information Science Mathematical Morphology Mathematical Petrology Multifractals Multiple Point Statistics Spatial Data Science Spatial Statistics and Stochastic Process Modeling Each topic incorporates cross referencing to related articles and also has its own reference list to lead the reader to essential articles within the published literature The entries are arranged alphabetically for easy access and the subject and author indices are comprehensive and extensive

Handbook of Research on Advancements of Swarm Intelligence Algorithms for Solving Real-World Problems Cheng, Shi, Shi, Yuhui, 2020-04-24 The use of optimization algorithms has seen an emergence in various professional fields due to its ability to process data and information in an efficient and productive manner Combining computational intelligence with these algorithms has created a trending subject of research on how much more beneficial intelligent inspired algorithms can be within companies and organizations As modern theories and applications are continually being developed in this area professionals are in need of current research on how intelligent algorithms are advancing in the real world The Handbook of Research on Advancements of Swarm Intelligence Algorithms for Solving Real World Problems is a pivotal reference source that provides vital research on the development of swarm intelligence algorithms and their implementation into current issues While highlighting topics such as multi agent systems bio inspired computing and evolutionary programming this publication explores various concepts and theories of swarm intelligence and outlines future directions of development This book is ideally designed for IT specialists researchers academicians engineers developers practitioners and students seeking current research on the real world applications of intelligent algorithms

Notes techniques en hydrologie ,1977 Probabilistic Graphical Models Daphne Koller, Nir Friedman, 2009-07-31 A general framework for constructing and using probabilistic models of complex

systems that would enable a computer to use available information for making decisions Most tasks require a person or an automated system to reason to reach conclusions based on available information The framework of probabilistic graphical models presented in this book provides a general approach for this task The approach is model based allowing interpretable models to be constructed and then manipulated by reasoning algorithms These models can also be learned automatically from data allowing the approach to be used in cases where manually constructing a model is difficult or even impossible Because uncertainty is an inescapable aspect of most real world applications the book focuses on probabilistic models which make the uncertainty explicit and provide models that are more faithful to reality Probabilistic Graphical Models discusses a variety of models spanning Bayesian networks undirected Markov networks discrete and continuous models and extensions to deal with dynamical systems and relational data For each class of models the text describes the three fundamental cornerstones representation inference and learning presenting both basic concepts and advanced techniques Finally the book considers the use of the proposed framework for causal reasoning and decision making under uncertainty The main text in each chapter provides the detailed technical development of the key ideas Most chapters also include boxes with additional material skill boxes which describe techniques case study boxes which discuss empirical cases related to the approach described in the text including applications in computer vision robotics natural language understanding and computational biology and concept boxes which present significant concepts drawn from the material in the chapter Instructors and readers can group chapters in various combinations from core topics to more technically advanced material to suit their particular needs

New Directions in Statistical Signal Processing Simon S. Haykin, 2007 Leading researchers in signal processing and neural computation present work aimed at promoting the interaction and cross fertilization between the two fields Signal processing and neural computation have separately and significantly influenced many disciplines but the cross fertilization of the two fields has begun only recently Research now shows that each has much to teach the other as we see highly sophisticated kinds of signal processing and elaborate hierarchical levels of neural computation performed side by side in the brain In *New Directions in Statistical Signal Processing* leading researchers from both signal processing and neural computation present new work that aims to promote interaction between the two disciplines The book's 14 chapters almost evenly divided between signal processing and neural computation begin with the brain and move on to communication signal processing and learning systems They examine such topics as how computational models help us understand the brain's information processing how an intelligent machine could solve the cocktail party problem with active audition in a noisy environment graphical and network structure modeling approaches uncertainty in network communications the geometric approach to blind signal processing game theoretic learning algorithms and observable operator models OOMs as an alternative to hidden Markov models HMMs
