reader through the process of quantitative data analysis In the experimental sciences and interdisciplinary research data analysis has become an integral part of any scientific study Issues such as judging the credibility of data analyzing the data evaluating the reliability of the obtained results and finally drawing the correct and appropriate conclusions from the results are vital The text is primarily intended for undergraduate students in disciplines like business administration the social sciences medicine politics macroeconomics etc It features a wealth of examples exercises and solutions with computer code in the statistical programming language R as well as supplementary material that will enable the reader to quickly adapt all methods to their own applications

Probability and Statistics for Data Science Norman Matloff,2019-06-21 Probability and Statistics for Data Science Math R Data covers math stat distributions expected value estimation etc but takes the phrase Data Science in the title quite seriously Real datasets are used extensively All data analysis is supported by R coding Includes many Data Science applications such as PCA mixture distributions random graph models Hidden Markov models linear and logistic regression and neural networks Leads the student to think critically about the how and why of statistics and to see the big picture Not theorem proof oriented but concepts and models are stated in a mathematically precise manner Prerequisites are calculus some matrix algebra and some experience in programming Norman Matloff is a professor of computer science at the University of California Davis and was formerly a statistics professor there He is on the editorial boards of the Journal of Statistical Software and The R Journal His book Statistical Regression and Classification From Linear Models to Machine Learning was the recipient of the Ziegel Award for the best book reviewed in Technometrics in 2017 He is a recipient of his university's Distinguished Teaching Award

Think Stats Allen B. Downey,2015 *Probably Overthinking It* Allen B. Downey,2023-12-06 Teacher data scientist and blogger Allen B Downey knows well that the human mind has both an innate ability to understand statistics and to be fooled by them Statistically speaking you will be less popular than your friends arrive at a train station during a gap in service and fail to find a running mate in a race But more than surprising us errors in statistical thinking Downey shows can have a huge impact Statistical confusion has led to incorrect patient prognoses caused mistakes in predicting disasters like earthquakes hurt vaccination programs hindered social justice efforts and led to dubious policy decisions Written for those who may have once taken a statistics course but now forget almost everything they've learned the book includes a diversity of examples that use real data and have real world impacts Building understanding incrementally Downey engagingly and accessibly helps readers understand what we might learn when we get the mathematics right and the consequences when we get it all wrong

Statistical Methods in Software Engineering Nozer D. Singpurwalla,Simon P. Wilson,2012-12-06 This preface pertains to three issues that we would like to bring to the attention of the readers our objectives our intended audience and the nature of the material We have in mind several objectives The first is to establish a framework for dealing with uncertainties in software engineering and for using quantitative measures for decision making in this context The second is to bring into perspective the large body of work

having statistical content that is relevant to software engineering which may not have appeared in the traditional outlets devoted to it Connected with this second objective is a desire to streamline and organize our own thinking and work in this area Our third objective is to provide a platform that facilitates an interface between computer scientists and statisticians to address a class of problems in computer science It appears that such an interface is necessary to provide the needed synergism for solving some difficult problems that the subject poses Our final objective is to serve as an agent for stimulating more cross disciplinary research in computer science and statistics To what extent the material here will meet our objectives can only be assessed with the passage of time Our intended audience is computer scientists software engineers and reliability analysts who have some exposure to probability and statistics Applied statisticians interested in reliability problems are also a segment of our intended audience
