## **Forecasting And Big Data Analysis:**

Smart Cities: Big Data Prediction Methods and Applications Hui Liu,2020-03-25 Smart Cities Big Data Prediction Methods and Applications is the first reference to provide a comprehensive overview of smart cities with the latest big data predicting techniques This timely book discusses big data forecasting for smart cities It introduces big data forecasting techniques for the key aspects e g traffic environment building energy green grid etc of smart cities and explores three key areas that can be improved using big data prediction grid energy road traffic networks and environmental health in smart cities The big data prediction methods proposed in this book are highly significant in terms of the planning construction management control and development of green and smart cities Including numerous case studies to explain each method and model this easy to understand book appeals to scientists engineers college students postgraduates teachers and managers from various fields of artificial intelligence smart cities smart grid intelligent traffic systems intelligent environments and big data computing

**Data-Driven Modelling and Predictive Analytics in Business and Finance** Alex Khang,Rashmi Gujrati,Hayri Uygun,R. K. Tailor,Sanjaya Gaur,2024-07-24 Data driven and AI aided applications are next generation technologies that can be used to visualize and realize intelligent transactions in finance banking and business These transactions will be enabled by powerful data driven solutions IoT technologies AI aided techniques data analytics and visualization tools To implement these solutions frameworks will be needed to support human control of intelligent computing and modern business systems The power and consistency of data driven competencies are a critical challenge and so is developing explainable AI XAI to make data driven transactions transparent Data Driven Modelling and Predictive Analytics in Business and Finance covers the need for intelligent business solutions and applications Explaining how business applications use algorithms and models to bring out the desired results the book covers Data driven modelling Predictive analytics Data analytics and visualization tools AI aided applications Cybersecurity techniques Cloud computing IoT enabled systems for developing smart financial systems This book was written for business analysts financial analysts scholars researchers academics professionals and students so they may be able to share and contribute new ideas methodologies technologies approaches models frameworks theories and practices

**Big Data - BigData 2018** Francis Y. L. Chin,C. L. Philip Chen,Latifur Khan,Kisung Lee,Liang-Jie Zhang,2018-06-20 This volume constitutes the proceedings of the 7th International Conference on BIGDATA 2018 held as Part of SCF 2018 in Seattle WA USA in June 2018 The 22 full papers together with 10 short papers published in this volume were carefully reviewed and selected from 97 submissions They are organized in topical sections such as Data analysis data as a service services computing data conversion data storage data centers dataflow architectures data compression data exchange data modeling databases and data management

Information Granularity, Big Data, and Computational Intelligence Witold Pedrycz,Shyi-Ming Chen,2014-07-14 The recent pursuits emerging in the realm of big data processing interpretation collection and organization have emerged in

numerous sectors including business industry and government organizations Data sets such as customer transactions for a mega retailer weather monitoring intelligence gathering quickly outpace the capacities of traditional techniques and tools of data analysis The 3V volume variability and velocity challenges led to the emergence of new techniques and tools in data visualization acquisition and serialization Soft Computing being regarded as a plethora of technologies of fuzzy sets or Granular Computing neurocomputing and evolutionary optimization brings forward a number of unique features that might be instrumental to the development of concepts and algorithms to deal with big data This carefully edited volume provides the reader with an updated in depth material on the emerging principles conceptual underpinnings algorithms and practice of Computational Intelligence in the realization of concepts and implementation of big data architectures analysis and interpretation as well as data analytics The book is aimed at a broad audience of researchers and practitioners including those active in various disciplines in which big data their analysis and optimization are of genuine relevance One focal point is the systematic exposure of the concepts design methodology and detailed algorithms In general the volume adheres to the top down strategy starting with the concepts and motivation and then proceeding with the detailed design that materializes in specific algorithms and representative applications The material is self contained and provides the reader with all necessary prerequisites and augments some parts with a step by step explanation of more advanced concepts supported by a significant amount of illustrative numeric material and some application scenarios to motivate the reader and make some abstract concepts more tangible

*Data Science and Applications* Satyasai Jagannath Nanda,Rajendra Prasad Yadav,Amir H. Gandomi,Mukesh Saraswat,2024-02-24 This book gathers outstanding papers presented at the International Conference on Data Science and Applications ICDSA 2023 organized by Soft Computing Research Society SCRS and Malaviya National Institute of Technology Jaipur India from 14 to 15 July 2023 The book is divided into four volumes and it covers theoretical and empirical developments in various areas of big data analytics big data technologies decision tree learning wireless communication wireless sensor networking bioinformatics and systems artificial neural networks deep learning genetic algorithms data mining fuzzy logic optimization algorithms image processing computational intelligence in civil engineering and creative computing

Predictive Policing in Germany. Opportunities and challenges of data-analytical forecasting technology in order to prevent crime Vanessa Bauer,2020-01-08 Master s Thesis from the year 2019 in the subject Computer Science Theory grade A Management Center Innsbruck language English abstract This Master Thesis introduces theoretical fundamentals of Predictive Policing tools used in German police institutions such as Hot Spot techniques Near Repeat approaches Risk terrain Analysis and Concentric Zone Model In times of Big Data police work has also changed and the usage of forecasting technologies in order to prevent crime does not only vary state wide in definitions but also in its application Therefore objectives and appliances are described in general Additionally a chronological transformation is established in order to compare lineages in Germany with those in the USA Since Predictive Policing polarises the research

question deals with potential opportunities and challenges police institutions and the society have to deal with when it comes to leveraging data analytical forecasting technologies in order to prevent crime The motivation for writing the Master Thesis about the present topic stems from the fact that it is highly current and has not yet been thoroughly studied Preventing crime and thus ensuring a safe environment is an important field of research in our society and should be guaranteed with problem oriented policing Since there are varying considerations and application measures of PP according to different country side frameworks the Thesis provides an overview about technical functioning and practical appliance within Germany Therefore content provides on the one hand added value for lecturers and students in the field of Public Security Management and related studies or police officers in the upper grade of the civil service On the other hand it serves to educate citizens about how far the technologies have progressed in this area and to what extent this will influence the lives of citizens in the future Many police departments worldwide test software based forecasting technologies according to their relevance in practice Forecasting systems work with data sets about already registered crime activities Those datasets are then complemented with socio spatial calendar and meteorological data Since the amount of collected and analyzed data increases day by day the question arises as to what extent Machine Learning and Artificial Intelligence will influence the human advice origin to predict and prevent crime

Big Data Analytics and Management Forecasting Behavior Beng Wee Goh, Na Li, Tharindra Ranasinghe, 2023 This paper investigates whether the use of big data analytics by firms has a spillover effect on management forecasting behavior Insights provided by big data could potentially improve firms ability to forecast earnings supply channel and investor demand for earnings information is likely higher for firms engaging in data analytics demand channel Using a text based measure of firms commitments to and usage of big data analytics we find that big data analytics usage is positively associated with the propensity to issue management earnings forecasts Consistent with the supply channel explanation we find that big data analytics usage is positively associated with management forecast accuracy as well Also supporting the demand channel explanation we find that big data analytics usage is associated with greater analyst following Our findings of improved disclosure following commitments to big data analytics highlight a potentially unintended benefit of the big data revolution

**Understanding Big Data: Analytics for Enterprise Class Hadoop and Streaming Data** IBM Paul Zikopoulos, Chris Eaton, Paul Zikopoulos, 2011-10-19 Big Data represents a new era in data exploration and utilization and IBM is uniquely positioned to help clients navigate this transformation This book reveals how IBM is leveraging open source Big Data technology infused with IBM technologies to deliver a robust secure highly available enterprise class Big Data platform The three defining characteristics of Big Data volume variety and velocity are discussed

You'll get a primer on Hadoop and how IBM is hardening it for the enterprise and learn when to leverage IBM InfoSphere BigInsights Big Data at rest and IBM InfoSphere Streams Big Data in motion technologies Industry use cases are also included in this practical guide Learn how IBM hardens Hadoop for enterprise class scalability and reliability Gain insight into IBM's unique in motion and at rest Big Data analytics platform Learn tips and tricks for Big Data use cases and solutions Get a quick Hadoop primer

*Big Data Software Solutions by IBM, Oracle, SAP and Microsoft. A Market Overview*  
Wolfgang Steinhart, 2017-09-05 Seminar paper from the year 2017 in the subject Computer Science Software grade 1.0  
California Lutheran University Business Administration course MBA for Executives language English abstract In this research paper the author would like to take a look at the current Big Data vendors and present the status quo of the leading Big Data solutions The Big Data market has grown significantly in the last years The offered solutions are very sophisticated and cover a broad range of user requirements and have become more user friendly In the recent years several well known IT companies released new products that specialize in Big Data analysis The desire to analyze more and more data to gain a better understanding of e.g. customer needs manufacturing efficiencies or e.g. to create predictive analysis based on past consumer behavior drove the need to enhance the functionality of existing business intelligence solutions towards a more open Big Data architecture that allows the analysis of massive amounts of structured and unstructured data

**The Future Of Election Forecasting Using Social Media Based Methods. Prospect or Pitfall?**  
Marla van Nieuwland, 2015-11-24 Seminar paper from the year 2015 in the subject Communications Media and Politics Politic Communications grade 1.0  
University of Constance language English abstract In 2013 Daniel Gayo Avello captured the state of the art regarding election prediction with social media publishing a meta analysis the very first one in this field of study Concluding after an extensive literature review that the prevailing view among scientists is overly optimistic Gayo Avello declares three major problems that have to be addressed by future research 1 The need to produce a true forecast that is published before the election 2 The need to take into account the biases on Twitter especially the unrepresentativeness of the sample 3 The need to incorporate sentiment rather than just tweet volume The research question of this paper is very similar to Gayo Avello's meta analysis to give an overview of the current state of the art two years later assess if the past problems and questions scientists raised have been discussed and in the last step answer whether or not Twitter can be used as an efficient alternative to traditional electoral forecasting Although two years might not be a lot of time considering the time it takes for a study to be conducted and published the number of scientists contributing to this fairly new field of research is extremely high therefore making much more understanding in a short time possible Necessarily I will only highlight a selection of studies not being able to shed light on all studies In a nutshell I will take the 3 demands by Gayo Avello as a guideline to order recent studies then give a quick insight into the current discussion in the scientific field and in the end come to the conclusion that traditional polling and social media based approaches do not have to be exclusive but can and should be

combined in future research      *Maynard's Industrial and Systems Engineering Handbook, Sixth Edition* Bopaya Bidanda, 2022-09-16 The classic industrial engineering resource fully updated for the latest advances Brought fully up to date by expert Bopaya M Bidanda this go to handbook contains exhaustive application driven coverage of Industrial Engineering IE principles practices materials and systems Featuring contributions from scores of international professionals in the field Maynard s Industrial Engineering Handbook Sixth Edition provides a holistic view of exactly what an Industrial Engineer in today s world needs to succeed All new chapters and sections cover logistics probability and statistics supply chains quality product design systems engineering and engineering management Coverage includes Productivity Engineering economics Human factors ergonomics and safety Compensation management Facility logistics Planning and scheduling Operations research Statistics and probability Supply chains and quality Product design Manufacturing models and analysis Systems engineering Engineering management The global Industrial Engineer IE application environments      **Warnings** Richard A. **Forecasting Housing Output with Artificial-Intelligence-Based Big Data Analytics** Xuxin Mao,2023 Big Data and artificial intelligence are quickly changing economic forecasting practices While the big data analytics is gradually applied in the construction industry it has not been widely used for construction predictions Although the economists start to use Google search data to predict house prices they have not adopted advanced machine learning techniques such as natural language processing for predicting housing output We first review a history of forecasting techniques used in the 20th and early 21th century With artificial intelligence based big data analytics the study then uses natural language processing to select key Google search phases and predicts housing output with Google trends macroeconomic and market conditions data within a multivariate time series model We find that AI based big data analytics can help to explain the short term dynamics in the housing markets and provide some useful short term forecasts of construction output Meanwhile using all related information including macroeconomic and market conditions will improve the robustness of the forecasts Therefore the study fills the following research gaps Firstly it is the first research to use natural language processing to select key phases for constructing big data indices Secondly it adopts big data such as Google search data for predicting construction output in the housing market
