Learn Machine Learning With Data Chauncey Stanhope, 2021-07-09 Machine learning is the study of computer algorithms that improve automatically through experience and by the use of data It is seen as a part of artificial intelligence Machine learning algorithms build a model based on sample data known as training data in order to make predictions or decisions without being explicitly programmed to do so Machine learning algorithms are used in a wide variety of applications such as in medicine email filtering speech recognition and computer vision where it is difficult or unfeasible to develop conventional algorithms to perform the needed tasks If you are someone who learns by playing with the code and editing the data or equations to see what changes then use those resources along with the book for a deeper understanding The topics covered in this book are An overview of decision trees and random forests A manual example of how a human would classify a dataset compared to how a decision tree would work How a decision tree works and why it is prone to overfitting How decision trees get combined to form a random forest How to use that random forest to classify data and make predictions How to determine how many trees to use in a random forest Just where does the randomness come from Out of Bag Errors Cross Validation how good of a fit did the machine learning algorithm make Gini Criteria Entropy Criteria how to tell which split on a decision tree is best among many possible choices And More

[Machine Learning](#) Gang Chen, 2017-01-28 This book is a beginner's guide to study machine learning with focus on basic methods and algorithms It aims at senior undergraduates graduate students and researchers in areas such as computer science bioinformatics statistics and psychology It is helpful for readers to be familiar with elementary calculus linear algebra and probability before understanding the concepts and contents in this book To make it easy to understand we also provide basic mathematic reference in Appendix A and B Our focus is on machine learning basics models and also the recent trends More specifically we provide the most widely used mathematical models derivation and optimization techniques We intentionally avoid the experiments and evaluations because machine learning models are sensitive to various settings and datasets Instead this book is more like a tutorial of machine learning methods and algorithms with the hope that readers can understand the basics and learn how to derive equations and optimize a given objective functions This means this book will mainly present methods and approaches to different machine learning problems In addition this book covers most machine learning topics such as supervised learning unsupervised learning and semi supervised learning Considering metrics playing a vital role to learn models we start with similarity measures and build all topics based on these fundamentals Most chapters will introduce

a distinct family of machine learning models given different training inputs with focus on understanding the models thoroughly While we cannot reflect the most advances in machine learning the mathematic methods and logics will lay solid foundations for readers to learn and handle more complex situations in different applications We hope you enjoy and like the book
