**Multi-Criteria Decision-Making Sorting Methods** Luis Martinez Lopez, Alessio Ishizaka, Jindong Qin, Pavel Anselmo Alvarez-Carrillo, 2023-04-28 Multi Criteria Decision Making MCDM is a generic term for all methods that help people making decisions according to their preferences in situations where there is more than one conflicting criterion It is a branch of operational research dealing with finding optimal results in complex scenarios including various indicators conflicting objectives and criteria The approach of MCDM involves decision making concerning quantitative and qualitative factors The importance and success of MCDM are due to the fact that they have successfully dealt with different types of problematics for supporting decision makers such as choice ranking and sorting description Even though each of the different problematics in MCDM is important Multi Criteria Decision Making Sorting Methods will focus on sorting approaches across a wide range of interesting techniques and research disciplines The applications which have been and can be solved by these techniques are more and more important in current real world decision making problems Therefore the book provides a clear overview of MCDM sorting methods and the different tools which can be used to solve real world problems by revising such tools and characterizing them according to their performance and suitability for different types of problems The book is aimed at a broad audience including computer scientists engineers geography and GIS experts business and financial management experts environment experts and all those professional people interested in MCDM and its applications The book may also be useful for teaching MCDM courses in fields such as industrial management computer science and applied mathematics as new developments in multi criteria decision making Provides insights into the latest research trends in MCDM sorting methods and fuzzy based approaches Focuses on the application of MCDM sorting methods to GIS based problems Presents engineers computer scientists and researchers with effective and efficient solutions to real world problems *Quadruple Neutrosophic Theory And Applications, Volume I* Florentin Smarandache, Memet Şahin, Vakkas Uluçay, Abdullah Kargun, Better Public Transit Systems Eric Christian Bruun, 2013-11-07 Better Public Transit Systems is a complete primer for performance and investment analysis of public transportation Whether you re planning a major new public transit project an extension or expansion of an existing system or evaluating the needs of your current system this book provides the tools you need to define your goals and objectives and conceive and analyse design alternatives This completely revised Second Edition includes new material for students and online discussion questions whilst remaining an essential reference book Consensus Ali Ahmadian, Ashok Kumar Yadav, Om Pal, Massimiliano Ferrara, 2025-11-30 Consensus Fueling Blockchain Innovation and DApp Expansion explores the complexities of consensus mechanisms in order to shed light on emerging trends best practices and real world applications that can fuel blockchain innovation while encouraging the dissemination of DApps across various industries Additionally the book bridges a crucial gap in the literature by providing in depth insights into the role of consensus mechanisms in shaping the future of blockchain

technology and decentralized applications This book delves into the fundamentals of blockchain technology along with the roles and significance of vital consensus mechanisms their underlying principles formal specifications functional characteristics architecture frameworks and potential across diverse blockchain applications Moreover the book meticulously explores classification performance metrics and design parameters It offers a comprehensive comparative analysis of these mechanisms shedding light on their computational and communication complexity strengths weaknesses and suitability Additionally the book delves into future research directions highlighting emerging trends and areas requiring further investigation It also addresses the efforts underway to address existing challenges and open issues within the realm of consensus mechanisms ensuring a comprehensive understanding of the state of the art in this pivotal aspect of blockchain technology Due to the wide range of availability and evolving new consensus mechanisms selecting an optimal and suitable consensus for a specific blockchain application is one of the crucial challenges in the development and innovation of blockchain systems This book has also a discussion on appropriate selection algorithms based on multi attribute decision making for specific blockchain systems and DApps development Provides readers with an in depth understanding of the fundamental concepts of blockchain technology and its numerous essential consensus mechanisms Provides insights into emerging trends and future developments in consensus mechanisms and their potential implications for blockchain innovation and DApp expansion Offers a comprehensive examination of consensus mechanisms highlighting their pivotal role in driving blockchain innovation and expanding decentralized applications DApps Presents practical insights into real world implementations alongside comparative analyses of different consensus models empowering readers with decision making tools to select the most suitable mechanism for their blockchain systems and applications Includes discussions on multi attribute decision making for consensus selection addressing a critical challenge faced by developers

*Advances in Renewable Energies and Power Technologies* Imene Yahyaoui, 2018-02-12 *Advances in Renewable Energies and Power Technologies* Volume 1 Solar and Wind Energies examines both the theoretical and practical elements of renewable energy sources such as photovoltaics solar photothermal and wind energies Yahyaoui and a team of expert contributors present the most up to date information and analysis on renewable energy generation technologies in this comprehensive resource Covers the principles and methods of each technology an analysis of their implementation management and optimization and related economic advantages and limitations Features recent case studies and models of each technology A valuable resource for anyone working in the renewable energy field or wanting to learn more about theoretical and technological aspects of the most recent inventions and research in the field Offers a comprehensive guide to the most advanced contemporary renewable power generation technologies written by a team of top experts Discusses the energy optimization control and limitations of each technology as well as a detailed economic study of the associated costs of implementation and management Includes global case studies and models to exemplify the technological possibilities and limitations of each

Law, Decision-Making, and Microcomputers Stuart S. Nagel, 1991-02-28 The rise of microcomputers and the power that they've brought have revolutionized nearly every professional discipline not the least of which is the field of law This work presents a survey of microcomputers and decision aiding software in law practices and the legal process offering a variety of perspectives from contributors around the world The book defines decision making software as having the ability to aid in the processing of a set of law related alternatives relative criteria or rules for determining which alternative should or will be chosen and the relationship between each alternative and criterion These basic ideas are applied to the work of various members of the legal community including practicing lawyers legal policy makers and legal scholars Following a detailed introduction that provides an overview of the nature trends and costs benefits of decision making software the book focuses on the different members of the legal community and the normative and predictive questions that microcomputers and software can help to answer Part One deals with the practicing lawyer who must decide whether to go to trial or settle out of court and predicts the outcome of going to trial or the effects of alternative contract clauses The legal policymaker who must decide among alternative statutes and predict the effect of legal policy is addressed in Part Two Topics of discussion here include the role of computers in federal tax compliance and using computers to assist in sentencing Part Three examines the legal scholar and law training covering subjects such as the American legal computer education and using microcomputers in case method teaching Finally Part Four provides analyses that cut across all three parts of the legal profession with special concentration on legal prescription and prediction that apply to a wide variety of legal fields countries and purposes of the law This volume will be of particular interest to practicing lawyers in government and private practice law professors and students and legal researchers and librarians Public academic and law libraries will also find it to be a valuable addition to their collections

**Policy Studies** Stuart S. Nagel, 1988-11-22

Less fragmented than the author's earlier work this book synthesizes Nagel's perspective on the field of policy analysis. As the field's principal organizer and leading promoter, one is indebted to Nagel for his energy, enthusiasm, and resourcefulness. This volume is itself imbued with such qualities. It covers vast territory, insistently counters the skeptics, and develops original schema for evaluating the work of the field. Furthermore, as vintage Nagel, the book is highly structured with many definitions, lists, and prenamed series of ideas. The author provides numerous hypothetical examples of his points worked out in succinct formulas and terse explanations. Nagel is unswervingly convinced of the correctness of the rationalist perspective and anchors himself firmly in behaviorist political science while accepting the contributions from other social sciences. Not one to qualify a statement or beat around the bush, the author enunciates many guiding principles and values such as effectiveness, efficiency, and equity. Nagel discusses software options for those interested in conducting analysis with microcomputers. He also gives advice on teaching with computers. Important for graduate students and university libraries. Choice. The purpose of this work is twofold. First, it attempts to integrate the basic ideas that relate to policy studies. These include the definition of concepts, the establishment of criteria for judging policy studies research, and the clarification of policy goals. Second, the volume proposes to evaluate the methods of policy evaluation themselves and to assess the field as a whole. Designed to serve as a definitive analysis of policy studies, this volume covers basic concepts, research criteria, societal goals, and policy alternatives. It also examines analytic methods, optimizing statistics, quasi-experimentation, behavioralism, multicriteria decision making, evaluation research, legal analysis, and conflicting critiques of the field. It was written for researchers and instructors of public policy studies and will also assist public policy specialists and others interested in the application of social science and other fields of knowledge to important public policy issues. *MCDM* Milan Zeleny, 1984

**Multicriteria Decision-Aid** Philippe Vincke, 1992-07-27. Decision aid. Philippe Vincke, Université Libre de Bruxelles. Over the past decade, the discipline of multicriteria decision aid has been extensively developed in the world of mathematics. As its name indicates, multicriteria decision aid aims to give decision makers a tool which should enable them to advance in solving decision problems where several points of view must be taken into account. Written by one of the leading authorities in the field, this book provides a unique introduction to the foundations, models, and methods of multicriteria decision aid. Challenging the monocriteria decision aid approach to problem solving, Vincke presents us with a unique book which deals with preference modelling, the multiple attribute utility theory, the outranking approach, and interactive decision making methods in the same text. Multicriteria Decision aid is directed at graduates and postgraduates studying in the fields of management, operations research, decision analysis, and all those who in business and administration wish to take part in decision making through scientific reasoning. **Public Administration and Decision-Aiding Software** Stuart S. Nagel, 1990-10-16. This contributed volume offers a summary of the latest ideas and applications concerning decision making software as applied to administrative decision making and public policy making. Stuart Nagel, the editor of this work, defines

the essence of decision aiding software to be software that is designed to enable users to process a set of 1 goals to be achieved 2 alternatives available for achieving them and 3 relations between goals and alternatives in order to choose the best alternative combination allocation or predictive decision rule Containing contributions from both practitioners and theorists this book should be of immediate value to those professionals involved in the field of public administration The book is organized in terms of the major fields of public administration which have been divided into staff procedural activities and into line substantive activities The first part of the book deals with cross cutting procedures including organization theory policy analysis and financial management The second part deals with substantive chapters including criminal justice health environmental energy and transportation as administrative fields The third part of the book involves chapters which combine procedures and substance It includes developmental policy with chapters emphasizing the perspectives of people from developing countries toward the relevance of computers and decision aiding software It also includes the perspective of people from more developed countries trying to apply policy analysis methods to developmental policy The third part also deals with public administration education It emphasizes data banks that are available through telecommunications systems to aid in teaching various aspects of public administration procedures and substance This book should be of interest to public administrators and scholars of the field
